Foreword by the Humanitarian Coordinator

People in the Arid and Semi-Arid (ASAL) region of Kenya are facing a dire situation which requires an immediate response.

During a recent visit to the region, I met with women, men, and children in Wajir, who all told me how their lives are being upended by the drought which they are enduring, caused by back-to-back poor rainy seasons.

There are now more than 2.9 million people in urgent need of humanitarian assistance in the ASAL region. This includes at least 2.1 million people facing severe food insecurity in the region in October 2021, which will rise to 2.4 million by the beginning of November – nearly triple the number at the same time last year. Acute malnutrition is increasing, posing an imminent risk to children and pregnant and lactating women, while men are having to trek further afield to access water, food and forage, resulting in family separation and tensions between communities. Women, children and the elderly are also facing increased risks of exploitation and abuse as a result of the deteriorating situation.

Within this context, this Kenya Drought Flash Appeal calls for nearly US\$139.5 million to deliver life-saving and life-sustaining relief to 1.3 million people whose lives have been hardest-hit by the crisis, of which an estimated \$28.5 million has already been received from donors, including \$5 million from the United Nations Central Emergency Response Fund.

The appeal brings together 45 humanitarian partners, including UN agencies, international non-governmental organizations (NGOs), national NGOs and the Kenya Red Cross Society, to complement the Government's response to the drought crisis in the ASAL region.

Humanitarian partners reached nearly half a million people in the ASAL region in the first seven months of 2021, in support of the Government-led response. However, much more must be done. Without additional funding, we risk jeopardizing the amazing efforts that are already underway and will certainly not be able to meet the rapidly growing needs that I have seen in the ASAL region.

It is imperative that we act now, working closely with communities and community-led organizations, to alleviate the suffering caused by the severe drought that is ravaging the ASAL region of the country.

Dr. Stephen Jackson
UN Resident Coordinator in Kenya

Crisis Overview

The cumulative impact of two consecutive poor rainy seasons, coupled with the COVID-19 pandemic, insecurity, pests and diseases have caused humanitarian needs to rapidly rise in the Arid and Semi-Arid Lands (ASAL) region of Kenya, leading to the [declaration](#) of a national disaster by the President of Kenya on 8 September 2021. Both the 2020 short rains (October to December) and the 2021 long rains (March to May) were poor across the ASAL counties. The two rainy seasons were characterized by late onset rainfall in most counties, as well as poor distribution of rainfall in time and space. In addition, forecasts indicate that the upcoming short rains season (October to December 2021) is likely to be below-average, compounded by the negative Indian Ocean Dipole.

There are now at least 2.1 million people who are severely food insecure and adopting irreversible coping strategies to meet their minimum food needs, and this is expected to rise to nearly 2.4 million people from November 2021, according to the latest Integrated Phase Classification (IPC) [analysis](#). This will include an estimated 368,000 people in Emergency (IPC Phase 4) and 2 million people in Crisis (IPC Phase 3), and is nearly three times (852,000) the number of people who were facing high acute food insecurity from [October to December 2020](#). Nine counties are expected to have the highest numbers of people in IPC Phase 3 and above from November 2021 onwards: Turkana, Mandera, Lamu, Garissa, Wajir, Kwale, Kitui, Tana River and Isiolo. Food insecurity is expected to worsen in the period ahead based on the likelihood of poor rains during the upcoming short rains season (October to December).

Livelihoods have been severely impacted by the multiple shocks that communities have endured over the past year. The 2021 long rains production in the marginal areas is expected to be 42 to 70 per cent below the long-term average (LTA) for maize, 61 to 89 per cent below LTA for green grams and 58 to 86 per cent below LTA for cowpeas. For farming households, below-average harvests result in reduced household income, making it difficult for families to purchase food as household food stocks decline. Household maize stocks are 31 to 54 percent below the five-year average in most marginal agricultural areas, with maize stocks projected to last one to two months compared to three or four months normally, according to the 2021 Long Rains Assessment, led by the National Drought Management Agency (NDMA). In pastoral areas, below-average rangeland regeneration has negatively impacted livestock production, resulting in below-average milk production and consumption and high staple food prices. Milk production ranges from 0.25 to 3 litres per household per day compared to the normal 2 to 6 litres. Likewise, daily household milk consumption ranges from 0.25 to 1.6 litres per household per day compared to the average 1 to 3 litres.

Over 465,200 children under 5 and over 93,300 pregnant or lactating women are acutely malnourished in the ASAL region, according

to the latest [IPC Acute Malnutrition Analysis](#). The nutrition situation is Critical (IPC Acute Malnutrition (AMN) Phase 4) in Garissa, Wajir, Mandera, Samburu, Turkana, North Horr and Laisamis sub-counties in Marsabit County and Tiati in Baringo County and Serious (IPC AMN Phase 3) in Tana River and West Pokot Counties. Worryingly, acute malnutrition has surpassed the emergency threshold in many areas, affecting between 15 per cent and 30 per cent of children in at least eight counties. Low food and milk availability, high morbidity, limited access to health and nutrition services, stock-out of essential supplies for management of acute malnutrition and poor childcare practices, coupled with underlying issues such as poverty, high illiteracy, and poor infrastructure have resulted in atypically high acute malnutrition prevalence across pastoral areas. In the period ahead, the nutrition situation is projected to worsen, particularly affecting children and mothers, in Turkana, Samburu, Mandera, Garissa, Wajir, Isiolo and North Horr and Laisamis, and will deteriorate significantly if the 2021 short rains perform poorly, as anticipated.

Access to water is an urgent concern for both humans and livestock. Many open water sources -including rivers, water pans, and dams- have dried up across pastoral and marginal agricultural livelihood zones, and other open water sources at 20 to 40 percent of capacity. Eighty-seven per cent of counties report above-average distances to water sources for households and 78 per cent report above-average distances to water for livestock, according to the latest NDMA monitoring. Household trekking distances to watering points have increased to an average of 2 to 6 kilometers, up from the five-year average of 1 to 5 kilometers. Across most pastoral areas, livestock return trekking distances have also increased: in Marsabit, trekking distances are exceptionally high at 25 to 30 kilometers, compared to 15 to 20 kilometers normally; in Wajir, livestock trekking distances range from 15 to 20 km, around 3 to 4 times the normal distance of 5 kilometers.

With pastoralists having to walk longer distances in search of water, food and forage for their livestock, tensions among communities have risen and an increase in inter-communal conflict has been reported, according to an assessment by the ASAL Humanitarian Network. Atypical livestock migration is expected to intensify from September through October 2021 and from December 2021 until the beginning of the 2022 March to May long rains, according to the latest IPC analysis. As rangeland resources deteriorate rapidly in the period ahead, migration to dry-season grazing areas and other atypical routes are expected to further intensify, potentially increasing the incidence of resource-based conflict and disrupting markets, schooling, livelihoods and access to health facilities and services.

Women, children and elderly people are often left behind in their villages, as men travel to access water, food and forage, heightening the risks of family separation, violence, exploitation, abuse and

school drop-outs, as highlighted by the ASAL Humanitarian Network assessment and previous drought responses. During the 2017 drought in Kenya, children were often left behind with neighbours or relatives, or otherwise left to fend for themselves in urban centres, while families who were unable to sustain or feed all their members resorted to child labour as a main and standard coping mechanism, according to an [Oxfam Protection Assessment](#). This often resulted in children dropping out of school to economically support their families, which is also a significant risk during the current crisis. Experience during the 2017 drought also highlights the risk of an increase in sexual and gender-based violence, including early marriage, during drought. These risks have also been exacerbated by COVID-19, with a 2020 nationwide [study](#) by UN Women, Care and Oxfam revealing that both women and men are resorting to acts of gender-based violence as a result of idleness, stress, and conflicts over scarce resources.

Most ASAL areas have reported disease outbreaks, including due to reduced availability of safe water sources and lack of access to improved sanitation and hygiene services. Upper respiratory tract

infections increased across all drought-affected areas and malaria is rising in Turkana and Samburu counties. Between May and July 2021, at least 36 suspected cases of cholera were reported in Garissa (Dadaab Refugee Camp) and Turkana counties, according to WHO, in addition to active outbreaks of measles in endemic areas of West Pokot and Garissa, and a new flare-up of kala-azar in Wajir since January 2021.

Looking ahead, with the 2021 short rains expected to be below-average, the drought crisis is expected to escalate. It is therefore imperative to act now. Food insecurity and malnutrition will continue to rise as families' access to food and income dries up. Livestock disease outbreaks and resource-based conflicts are also expected to intensify, significantly impacting and constraining livelihood activities. Livestock productivity is also expected to continue to decline, further reducing milk production and milk sales for households. Families are expected to intensify their use of consumption and livelihood coping strategies, which could result in further school drop-outs and heightened abuse of women and children.

Part 1

Response Strategy and Coordination

This Kenya Drought Flash Appeal covers October to December 2021 and complements the Government of Kenya's response to the national drought disaster. In his declaration of the national disaster, the President announced that the Government will implement comprehensive drought mitigation measures, after which the Government's Treasury announced the release of 2 billion Kenyan shillings (approximately US\$18 million) towards drought mitigation. This comes in addition to 1.7 billion (approximately US\$15.3 million) earlier announced for Government food assistance. Engagement is ongoing through the Kenya Humanitarian Partnerships Team with the National Drought Management Agency to understand the details of the Government's planned response and ensure that the humanitarian response implemented under this Flash Appeal is optimally complementary.

The Flash Appeal focuses on lifesaving and life-sustaining interventions in the most affected counties, while striving to reinforce the ability of communities to cope with the crisis through resilience-building measures. At the same time, the Flash Appeal acknowledges that longer-term action is required to tackle the root causes of the recurrent drought crises in the ASAL region. To this end, the Flash Appeal acknowledges the critical work undertaken through resilience building and climate adaption activities in the ASAL region in recent years and encourages the continuation and urgent amplification of these efforts, combined with strong and people-centred governance, to prevent such crises in the future.

Under the Flash Appeal, an estimated 1.3 million people will be targeted with humanitarian assistance. The Flash Appeal is premised on the understanding that a multi-sectoral and integrated response to the drought crisis is critical to provide a holistic response to people's needs. This response will be geographically focused in 20 out of 23 ASAL counties to maximize the impact of collective humanitarian action, with Embu, Narok and Nyeri excluded from the Flash Appeal response as they do not currently face a risk of severe drought.

The Flash Appeal builds upon the response already undertaken by humanitarian partners in 2021, which reached more than 491,000 people from January to July. It brings together the work and funding requirements of the humanitarian community in Kenya, including the United Nations, International Non-Governmental Organizations (INGOs) and National NGOs (NNGOs), as well as the Kenya Red Cross Society (KRCS). In particular, the appeal acknowledges the critical role played by organizations that are working with and for their own communities, as highlighted by the inclusion of projects implemented by NNGOs and the KRCS.

Of the \$139.5 million requested by humanitarian organizations through the Flash Appeal, upwards of \$28.5 million million has already been generously mobilized by international partners, including a \$5 million contribution from the United Nations Central Emergency Response Fund (CERF). In order to ensure that partners can rapidly scale-up their response, it is critical that additional funding is received swiftly under the appeal. This is especially the case for sectors which need to procure supplies, some of which are facing imminent pipeline breaks, as is the case for life-saving nutrition treatment.

Given the rising tensions among communities as a result of increased pastoralist migration, the Flash Appeal promotes a conflict-sensitive approach, urging humanitarian partners to ensure that all activities take into account the unique needs and context of the communities with whom they are working. The Flash Appeal also urges partners to implement their responses in a gender-, age- and disability-sensitive manner, which both acknowledges the unique needs of different groups of people, as well as their unique ability to contribute to the humanitarian response. This should build upon previous lessons learned including, for example, HelpAge's [study](#) on the role and vulnerabilities of older people during droughts in East Africa.

Strategic Objectives

Strategic Objective 1: Provide lifesaving and life-sustaining assistance to the people most affected by the drought through integrated humanitarian interventions.

This objective reflects the commitment of all partners to prioritise immediate life-saving assistance for the most vulnerable people. The aim is to provide an integrated, multi-sectoral response to comprehensively assist families impacted by the drought crisis. This response will be implemented in a gender-, age-, disability- and conflict-sensitive manner.

Strategic Objective 2: Strengthen resilience of drought-affected communities to mitigate the humanitarian impacts of the drought.

A key component of this objective is to ensure that emergency relief programs enhance sustainability. Partners in this plan commit to develop emergency programs in a way that empowers affected people to become more self-reliant and combat cyclical drought aid dependency. Humanitarian partners will also engage relevant Government and development partners to prioritize longer-term resilience activities within existing programs (e.g. the United Nations Sustainable Development Cooperation Framework, which is under development).

Coordination

The implementation of this Flash Appeal will be coordinated under the umbrella of the Kenya Humanitarian Partnership Team (KHPT), which includes the Government of Kenya, UN entities, non-governmental organizations (NGOs) and the Kenya Red Cross Society. The KHPT will meet monthly in order to ensure strategic coordination and complementarity of humanitarian action by the Government, national and international humanitarian actors in the drought response.

The KHPT works closely with the National Drought Management Authority (NDMA), which is mandated by the Government of Kenya to exercise overall coordination relating to drought management, including implementation of policies and programmes. The NDMA provides a platform for long-term planning and action, as well as a mechanism for coordination across Government and with all other stakeholders during drought emergencies. The Authority has established offices in 23 ASAL counties considered vulnerable to drought.

Sectoral coordination will also be reinforced to ensure timely and effective operational coordination of the response, bringing together national and international organizations to monitor response implementation, maximize the impact of humanitarian actions, avoid

duplication, and identify critical gaps in the response at a sectoral level. For example, the Kenya Food Security Meeting (KFSM) and the Kenya Food Security Steering Group (KFSSG) bring together various stakeholders, including Government line ministries, UN agencies and NGOs with a view to responding to the needs of food insecure people by identifying who and where they are, ascertaining their needs, and mobilizing resources to respond.

The Kenya Cash Working Group—which is co-chaired by the NDMA and the Kenya Red Cross Society—works in close collaboration with county coordination structures, with the overall objective to support the effective and efficient implementation, delivery and potential scale-up of quality cash transfer programming in Kenya.

The Cash Working Group will, amongst other actions, look at ways to optimize the work across the multiple mechanisms in Kenya that provide cash assistance and/or social safety nets, including but not limited to the Hunger Safety Net Programme, the State Department of Special Programmes, the State Department of Social Protection, UN entities and non-governmental organizations. Harmonization efforts may include: strengthening the targeting of people hardest-hit by the drought (horizontal expansion); identifying the most appropriate amount of cash to disburse (vertical expansion); and refining market analysis in the targeted geographical areas.

GARISSA COUNTY

Families, particularly women and children, are forced to walk longer distances to find water sources, which became increasingly scarce due to the drought.

Part 2

Operational Capacity, Access & Feasibility

The ASAL region of Kenya is home to a significant number of community-led organizations and has strong presence of national and international organizations. Humanitarian partners have responded to multiple emergencies in the ASAL region in recent years, including the 2016/2017 drought, 2019 drought, COVID-19 and desert locusts. As a result, many key systems and processes are in place to ensure timely and efficient delivery of humanitarian assistance and protection in coordination with the Government of Kenya.

Capacity

The actions outlined in this plan are intended to complement the Government of Kenya's response to the drought in the ASAL region. Humanitarian partners with projects in the Flash Appeal have considered the Government's planned activities in their responses, to ensure optimal complementarity whenever feasible. Under this response plan, 45 humanitarian partners—including 14 national NGOs, 23 international NGOs, 7 UN entities and the Kenya Red Cross Society—will implement activities nationally, in support of the Government-led response. This highlights the important role played by local actors in humanitarian action in the ASAL region. The organizations included in the HRP have well-established presences in the ASAL region.

Access

Security threats persist in northeast Kenya—especially around the drought-affected counties of Mandera, Garissa and Wajir—and may affect humanitarian operations in the coming months. While there were no targeted attacks against humanitarian actors in the months leading up to the launch of the Flash Appeal, it is possible that non-state armed groups may exploit dynamics around the sharing of scarce resources in the ASAL region in the months ahead. There have been unverified reports of sightings of alleged Al Shabaab members in northeast counties around water points, and non-state armed groups may seek to exploit intercommunal conflicts between pastoralists and farmers, both within Kenya and across the border with Somalia, as groups migrate in search of food and water for their herds.

Intercommunal conflict remains significant in some ASAL counties, especially in Turkana West, Laikipia, West Pokot and Samburu North, but is not constraining humanitarian operations. Banditry activities, mostly cattle rustling and private ranch invasions, also continue in Laikipia county, with heightened tensions on the Baringo-Laikipia border. These dynamics, alongside migratory patterns across

the borders with Uganda and South Sudan, have triggered cross-border tension between the Toposa and the Turkana communities in West Turkana. Resource scarcity may also threaten peace processes signed between communities in Mandera county (eg in Banisa sub-county between the Garre and the Dagodia clans, and around Yedo between the Garre and Murule clans), which may in turn affect the humanitarian response.

Physical access in the vast ASAL region is challenging but possible. Although much of the road network in the ASAL region is untarmacked, it is possible to reach communities impacted by the drought. Should the region experience above-average rain during the short rains season (October-December), this could lead to flash floods which may temporarily inhibit access to specific locations. However, this is not expected to pose a major challenge for the response.

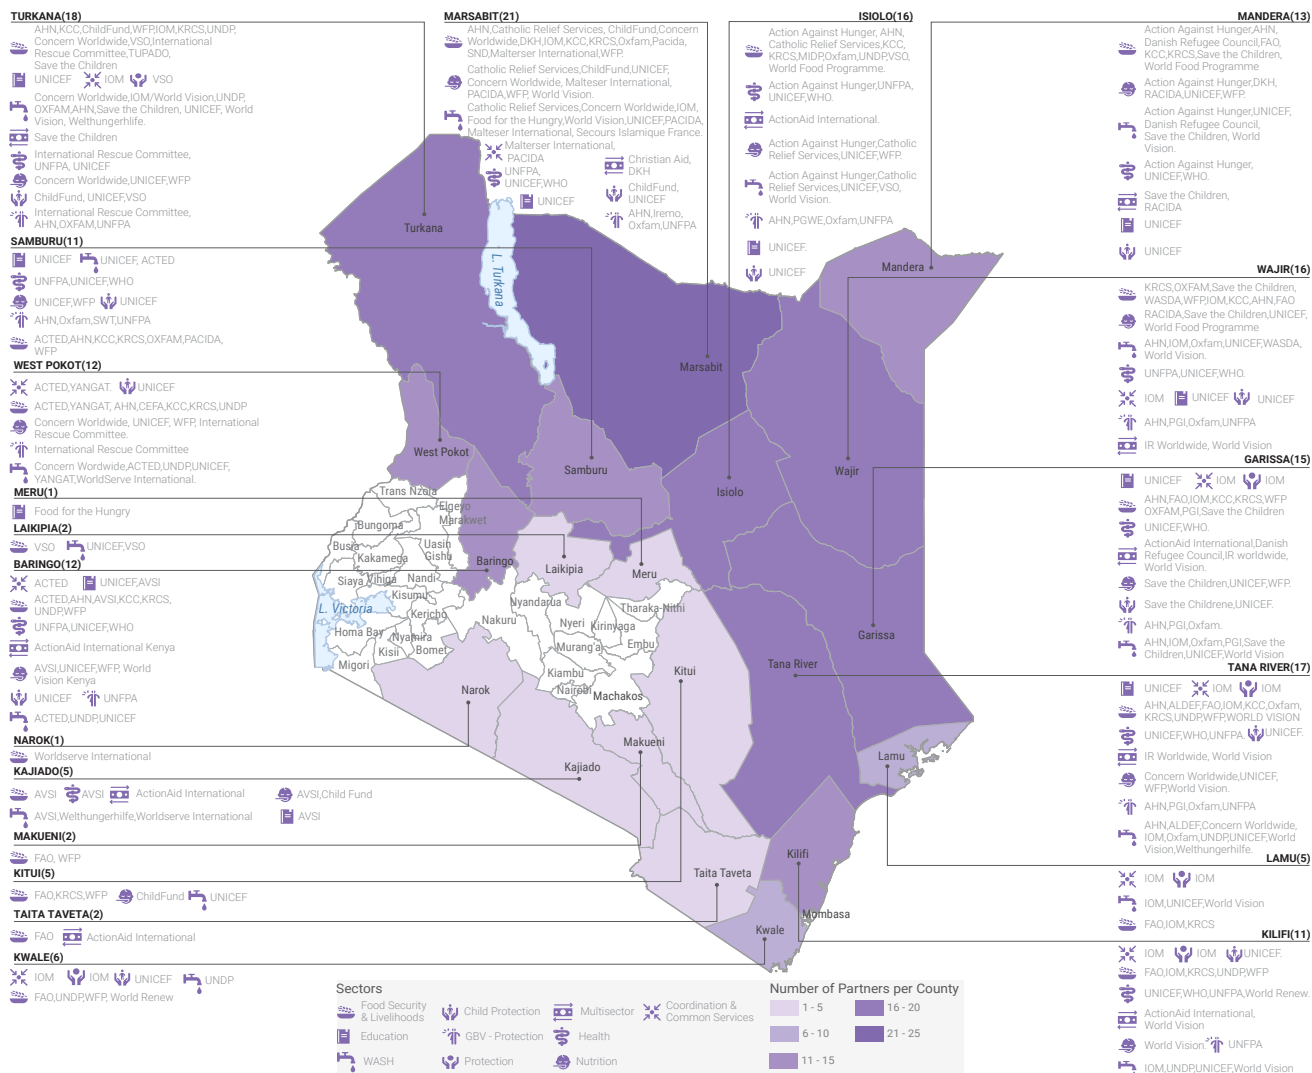

Feasibility

The Flash Appeal calls for a significant scale-up in humanitarian action in the ASAL region from October to December 2021 and, to that end, is reliant on a commensurate increase in funding. Although partners estimated that around \$28.5 million of the \$139.5 million required for the Kenya Flash Appeal had been received at the time of its launch, this means the appeal is just 20 per cent funded. It is vital that donors come forward with additional funding as soon as possible to ensure that the response can scale-up over the next three months.

Lead time is required to procure the necessary supplies to implement the response planned under the Flash Appeal. There are some unique challenges impacting procurement of required items, including the prevailing administrative situation at the Kenya Medical Supplies Authority (KEMSA). However, humanitarian partners are working to identify all options for the rapid replenishment of key supplies.

Due to under-resourcing, several services are currently operating below the desired capacity, especially outreach services.

Despite these challenges, the humanitarian community is confident in its ability to implement the planned activities under the Flash Appeal, should timely funding be received. As noted above, humanitarian partners have responded to multiple emergencies in the ASAL region, in support of Government-led efforts, and there is strong standing capacity in each of the counties that have been hardest-hit by the drought.

Part 3

Costing Methodology

The Kenya Drought Flash Appeal used project-based costing. In order to develop the appeal rapidly, partners were requested to share their planned response activities, as well as information on funding available for these. This was then consolidated to form the basis of the Flash Appeal, with partners encouraged to continue sectoral discussions on complementarity in the period ahead in order to avoid duplication and ensure maximum effectiveness of the response. All efforts were made to ensure synergies with the Government-led response, including through regular discussions and engagement with the NDMA through the KHPT on which activities were planned and implemented by the Government and in which locations.

PROJECTS

10

Context of the crisis in the sector

The drought in the ASAL region has been declared as a national emergency in Kenya. The scale of the emergency, as well as the significant number of humanitarian actors involved in the response, requires strong strategic and operational coordination to ensure that synergies are maximized and to inform cross-sectorial response with timely, accurate and relevant data, information and analysis. The regular updating of information on the needs and vulnerabilities of drought-affected people, as well as the status of public and community infrastructure, can feed into response planning and implementation.

People in need and targeted for assistance

The Coordination and Common Services Sector will directly benefit the 45 humanitarian organizations included in this appeal and will indirectly support the 1.3 million people targeted for humanitarian assistance. OCHA, through its Regional Office for Southern and Eastern Africa (ROSEA), will support and facilitate inter-sectoral prioritization of areas with the highest concentration of people facing the most severe needs, as well as promoting a gender- and disability-sensitive response. In seven counties (Lamu, Kilifi, Kwale, Garrisa, Tana River, Turkana and Wajir), more than more than 5,000 people (1,000 households) will be targeted under IOM's Displacement Tracking Matrix initiatives, with the information collected benefiting all sectors and organizations covered in the Flash Appeal, with updates provided to the Kenya Humanitarian Partnership Team (KHPT).

Sector Response Strategy

The following Coordination and Common Services activities will be prioritized:

- Ensuring safe and accessible channels for reporting of Sexual Exploitation and Abuse in Kenya;
- Timely dissemination of key information to all stakeholders, including to affected communities and in local languages;
- Regular needs, response and gaps analysis, including through information products such as the Dashboard;
- Operational coordination of humanitarian delivery, through coordination mechanisms adapted to the context that support the effective and coherent delivery of humanitarian assistance;
- Joint strategic response planning based on prioritized needs;
- Advocacy and coordination to ensure that people in emergencies are protected from harm and have access to assistance;
- Community engagement, protection, gender, age and disability sensitivity of the humanitarian response.

Displacement Tracking Matrix(DTM)

The data received through the DTM will facilitate evidence- and data-based emergency response for drought affected people and help monitor the potential risk of displacement due to drought. Through event tracking, potential conflict locations can also be mapped. Specific data collection and information management activities are:

- Displacement tracking and/or other mobility tracking;
- Event tracking;
- Multi Sectoral Needs Assessment;
- Protection risks and needs assessment.

PROJECTS

18

Context of the crisis in the sector

On average, only three out of every ten children are enrolled in school in the drought prone areas of Wajir and Mandera, according to the Ministry of Education. The situation is worse for girls whereby only two out of ten are enrolled and even fewer complete their education. During droughts, schools close due to lack of water and the few children enrolled drop out to migrate with their families in search of water and pasture. Out of school, in the immediate term, children in crisis are more exposed to abuse such as child marriage, trafficking and prostitution. Children as young as eight years old are being recruited by armed groups in the region, according to Save the Children.

People in need and targeted for assistance

An estimated 690,000 school aged children are at risk of dropping out of school or not continuing their education due to the drought in the ASAL region of Kenya. The Education in Emergency sector is targeting 290,000 of these children with different initiatives and activities, including both direct and indirect support. The Education in Emergency sector will focus on children in pre-primary, primary and secondary school, with the following counties prioritized for support: Isiolo, Garissa, Kilifi, Tana River, Mandera, Wajir, Turkana, Samburu, Marsabit, Kwale, Lamu, Taita Taveta, Embu, Nyeri, Kitui, Taveta, Embu, Nyeri, Tharaka, Baringo, West Pokot, Kajiado and Narok.

Sector response strategy

To ensure that children receive uninterrupted quality learning even in crisis, the Education in Emergencies sector will promote a multi-sectoral partnerships and coordination approach to support school-aged children, including through prioritizing the following activities:

- Increasing access to quality education for targeted children through the provision of different teaching/learning materials, community awareness campaigns and recreation and hygiene kits;
- Providing psycho-social support and socio-emotional learning for teachers and students;
- Strengthening school management and coordination in emergencies;
- Facilitating cross-sectoral linkages with WASH to ensure the provision of safe water and other WASH components (soap, handwashing) to schools;
- Advocating with the Ministry of Education and other stakeholder to enhance and expand the Schools Meals program to include all children (pre-primary, primary and secondary).

4.3

Food Security and Livelihoods

PEOPLE IN NEED	PEOPLE TARGETED	REQUIREMENTS (US\$)	PARTNERS	PROJECTS
2.4M	1.0M	\$59.3M	31	126

Context of the crisis in the sector

Kenya is grappling with an unprecedented after the failure of the short and long rainy seasons successively. More than 2.1 million people in the Arid and Semi-Arid Lands (ASAL) of Kenya are severely food insecure as of October 2021, with this number projected to reach 2.4 million by November 2021. This represents an increase of more than 70 percent since February 2021, when an estimated 1.4 million people (10 percent of the population in the ASAL counties) were classified in Crisis (IPC 3) or worse levels of food insecurity, according to the Integrated Food Security Phase Classification (IPC) analysis.

The Government of Kenya declared the ongoing drought a national disaster on 8 September 2021. While the government, both at national and county level, are working on a response plan, a call to action has been made to humanitarian actors for support given that the food insecurity situation has been compounded by the economic challenges facing the country because of the COVID-19 pandemic. The latter struck before the country had recovered from the Desert Locust invasion and other disasters. According to a recent assessment by the ASAL Humanitarian Network, there is high movement of pastoralists in search of water and pastures, with women, elderly and children left behind with limited food or nothing to eat.

People in need and targeted for assistance

Out of the 2.4 million people projected to be in IPC Phase 3 and above from November 2021, and in complement to the Government's response, the Food Security and Livelihoods (FSL) sector aims to provide assistance to over 1 million people in need in 13 ASAL counties, 10 of which have moved from alert to alarm drought situation levels. To achieve this in the next three months, the sector requires a total of US\$59.3 million.

Sector response strategy

The FSL sector will prioritize activities that will provide much-needed food assistance and aim to secure the livelihoods of drought-affected people, as follows:

- Food assistance will be provided through cash transfers (both multi-purpose and food-specific) and in-kind food distributions in locations where cash-based transfers are not viable. Given the effectiveness of cash-based transfers (see above, Section 4), cash will be the primary modality for food assistance;
- Activities aimed at safeguarding livelihoods will include training on and distribution of beehives and honey processing units, training for Nutrition Sensitive Agriculture (NSA) and NSA kit

distribution;

- On livestock and agriculture, there will be a focus on training of Government (including NDMA) and NGOs for livestock body condition assessments (climate-smart technology), Livestock Emergency Guidelines and Standards (LEGS), and support to vulnerable households with drought tolerant agricultural seeds and training farmers on crop and animal husbandry;
- Livelihood assistance will also be provided through distribution of livestock feed supplements, slaughter destocking and meat distribution to improve nutrition, animal health inputs for disease and vector control, support repair of boreholes for provision of water for livestock, provision of drought tolerant pasture and fodder inputs and crop inputs for irrigated areas. Livestock feed assistance will be targeted towards productive herds that are left behind when other herds migrate to dry season grazing areas. This will ensure that households continue getting milk for their children and elderly/sick so that these vulnerable groups do not slide into malnutrition. This not only helps the households to save money but will also help save the livestock assets in overcoming the drought while maintaining productivity.

The FSL response will fully utilize coordination structures right from the County and National level to ensure complementarity and avoid duplication at all levels. These include the County Steering Group (CSG), the National Cash Working Group (NCWG), the Kenya Food Security Steering Group (KFSSG) and Food Security and Livelihood (FSL) Sector amongst others. There will also be collaboration with the private sector to ensure effective use of required platforms e.g. for cash transfers.

Targeting and registration for food security and livelihoods support will be conducted in collaboration with the respective county governments and national government (for a deeper geographical targeting up to the village level, County Steering Groups (CSG) will be at the forefront, together with county government administrative structures up to ward or village level and the National Government Administrative Authorities (NGAOs) up to the assistant chief's level). Community-based targeting will be used at the village level to identify those who are most in need.

The FSL sector will collaborate in ensuring that a robust monitoring and evaluation and accountability system will be put in place and information shared effectively amongst all actors. Routine joint implementation monitoring will be carried out among people assisted to assess use and perception of services to improve program delivery.

4.4 Health

PEOPLE IN NEED	PEOPLE TARGETED	REQUIREMENTS (US\$)	PARTNERS	PROJECTS
1.5M	392K	\$9.2M	7	32

Context of the crisis in the sector

The protracted drought in the ASAL region has had serious consequences for communities' health and has compounded the already increased risks driven by the COVID-19 pandemic. At the same time, Government and partners have prioritized response to COVID-19, resulting in underfunding and under-resourcing of the drought response. As a result, communities are not accessing essential health services in far-flung health facilities, leading to a reduction in health-seeking, under-utilization of static health facilities, and reduced health services—including outreaches—due to the re-allocation of resources towards efforts to curb COVID-19. There was a reported decline in key health indicators in the first half of 2021, compared to the first half of 2020.

People in need and targeted for assistance

The most affected counties are Garissa, Isiolo, Kilifi, Mandera, Marsabit, Baringo, Samburu, Tana River, Turkana and Wajir with a total population of 1,583,013. The Health sector estimates that 313,603 people are in need of multiple health interventions. This includes 139,230 girls and boys, 38,382 adult men and 192,899 women of reproductive age who are in need of sexual and reproductive health services, including addressing the unmet need for family planning.

Sector response strategy

To ensure access to life saving multi-sectoral interventions that will avert deaths and mitigate vulnerability of affected children and women in increasing ASAL, humanitarian support is pivotal. Life-saving humanitarian health response is crucial, including through: strengthened coordination; heightened early warning and action at health and community levels; procurement of assorted life-saving health commodities; delivery of life-saving health services supported by WHO and partners at facility level and UNICEF and partners at community level; and interventions focusing on sexual reproductive health implemented by UNFPA and partners.

The Health Sector has prioritized life-saving measures that are drought sensitive and build on existing health infrastructure and service delivery systems while embracing innovation, with an emphasis on Increasing access and utilization of both curative and preventative

life-saving health services for children (girls and boys), pregnant and lactating women, people living with disabilities, and selected populations in extremely poor areas. Priority interventions will include:

- Enhancing identification, investigation, and interruption of disease outbreaks and acute malnutrition cases and management and timely referral of complicated cases for treatment, including by building the capacity of the health workforce on early warning and timely response to disease outbreaks and management of severe acute malnutrition in health centers, including service delivery, community participation in response, assessments and information management;
- Providing a range of maternal and newborn health services, in keeping with emergency obstetric and newborn care (EmONC) protocols;
- Implementing Enhanced Outreach Services (EOS) to provide assistance to drought affected communities with integrated package of acute watery diarrhea and cholera cases, and referral to treatment centers, management of acute pneumonia, measles cases and antenatal care;
- Carrying-out Behaviour social change communication to create community awareness on the importance of seeking early treatment for the conditions.
- Procuring life-saving commodities for diagnosis and management of epidemics, and severe illnesses, in collaboration with partners and government.

Overall, the sector will ensure no one is left behind in the response through a multi-sectoral and multi-stakeholder strategy that puts emphasis on the leadership of Government and the primary role of local actors, supported by the technical and resource mobilization capacity and logistical efficiency and effectiveness of the UN family. The Health Sector will build synergies and integrate interventions delivered by WHO, UNICEF, UNFPA, NGO partners and the Kenya Red Cross Society, in collaboration with the Ministry of Health at national and county levels. Strengthening Government capacity to oversee and coordinate interventions is considered a critical pillar of the drought response.

4.5

Protection

	PEOPLE IN NEED	PEOPLE TARGETED	REQUIREMENTS (US\$)	PARTNERS	PROJECTS
PROTECTION	10K	3K	\$0.11M	2	7
GENDER-BASED VIOLENCE	227K	60K	\$ 0.69M	8	17
CHILD PROTECTION	127K	55K	\$ 1.3M	4	17

General Protection

Context of the crisis in the sector

The drought has increased the risks of human trafficking in counties such as Garissa, Kilifi, Kwale and Tana River, where vulnerable people are in need of economic, psychosocial support and awareness-raising on human trafficking and the risk of irregular migration. As the drought worsens, vulnerable people—including households led by children—are falling into the traps of unscrupulous recruiters and intermediaries luring them with false promises of better livelihood opportunities. Women and girls are particularly exposed to the risk of trafficking, due to their having to walk longer distances to access essential supplies, including food and water, family separation caused by men and boys traveling to access forage for livestock, and resorting to negative coping mechanisms, including transactional sex, in the face of rising hunger (see further information on the risks faced by women and girls under 'Gender-Based Violence' below).

People in need and targeted for assistance

Community-based activities focused on preventing human trafficking will focus on the drought-affected areas in three counties (Kilifi, Kwale and Garissa), with a target of 1,500 women, men, girls and boys.

Sector response strategy

To mitigate the risk of human trafficking, the following activities will be prioritized:

- Awareness raising on dynamics of human trafficking;
- Provide emergency/immediate assistance to victims/survivors of human trafficking;
- Provide psychosocial counselling for victims/survivors of trafficking and other vulnerable groups.

Child Protection

Context of the crisis in the sector

The devastating drought in Kenya is exposing children to the risk of harm, including dropping out of school, child marriage, child labour, and family separation as caregivers migrate in search of alternative livelihoods. The drought—coupled with the effects of the COVID-19

pandemic and desert locust invasion—has eroded communities' capacity to provide for the basic needs of children. The loss of livelihoods and rising food insecurity caused by the drought are likely to cause psychosocial distress among children and caregivers, and as well as increasing the risk of violence against children and the adoption of negative coping mechanisms such as dropping out of school and resorting to child labour, female genital mutilation and child marriage. Fifty-one per cent of the 108,373 (52 per cent girls) cases recorded through the government's Child Protection Information Management Systems (CPIMS) database in 2021 relate to neglect, a risk that is likely to increase as the drought and the COVID-19 pandemic continue to affect caregivers' capacity to provide basic needs such as food, water, educational support, and other essentials for their children. Up to 3.5 per cent of the cases reported in CPIMS were sexual violence, highlighting the risk of sexual and gender-based violence against children, which may further escalate during the drought emergency.

People in need and targeted for assistance

Just under half (47 per cent) of the 2.4 million food insecure people affected by severe food insecurity are children, leaving an estimated 987,000 children affected by the drought. Although all of them are at increased risk of harm as a result of the drought, the sector estimates that the number of children in need of some form of protection-related service is 148,050. Of these, the sector will target 30,615 children who are most vulnerable to violence, exploitation and abuse, including Unaccompanied and Separated Children (UASC), those at risk of female genital mutilation and child marriage, those in need of psychosocial support, and survivors of violence, neglect and abuse.

Sector response strategy

The Child Protection Sector is led by the Government of Kenya's Department of Children Services and co-led by UNICEF and brings together international and national civil society organizations to respond to the protection and prevention of harm for children in some of the most inaccessible and deprived counties. However, insufficient funding to date has undermined efforts to implement measures that mitigate violence, abuse and exploitation of children, including interventions to prevent harmful practices such as child marriage and

female genital mutilation. Under this Flash Appeal, the Child Protection sector will work with the national and county governments in drought-affected counties, as well as with communities to strengthen community-based protection mechanisms, strengthen the protective environment and mitigate and prevent child protection and Gender-Based Violence (GBV) risks. This will include:

- Working with other sectors to integrate messages across all response sectors (e.g. food relief support, water trucking etc.), to strengthen awareness on child protection risks among children, caregivers and communities;
- Strengthening the protective environment so that children lacking food, separated from families, and at risk of sexual violence, child labour and harmful practices, are identified and linked to service providers for appropriate life-saving support. This will primarily be achieved through community outreach activities aimed at raising awareness on child protection and GBV risks, protective behaviours, available child protection services, as well as how to protect oneself and others from COVID-19 infection;
- Carrying out community engagement activities aimed at addressing social norms and harmful cultural practices, promoting positive parenting practices, as well as capacity building initiatives targeting community members on how to identify and report cases of violence and how to provide community-based support services to survivors and those at-risk.

In addition to preventing and mitigating protection risks through community engagement, the sector will:

- Work with community-based protection actors and the Department of Children Services (DCS) to ensure the timely provision of comprehensive protection services, making sure that the most deprived and vulnerable children, including children living with disabilities, are reached with life-saving child protection services and that there are referrals to other response services – i.e. nutrition services for malnourished children and legal and health services for survivors of GBV;
- Ensure the availability of protection services, include case management and support services for unaccompanied and separated children (UASC) such as family tracing and reunification for children separated from caregivers and families, as well as the provision of Psychological First Aid (PFA) and psychosocial support services to displaced children, including access to Child Friendly Spaces (CFS) and recreational activities.

In order to do no harm, all implementing partners will ensure that children and community members reached with prevention and response services have access to hand sanitizer and face masks to prevent the transmission of COVID-19.

Gender-Based Violence (GBV)

Drought has increased the risk of negative coping strategies that lead to protection concerns, such as child marriage and labor, school dropout and family separation (FAO 03/06/2019). Previous droughts in the horn of Africa have placed women and girls at an elevated risk of experiencing gender-based violence (Action. Aid 22/03/2017). In

addition, evidence suggests that child marriage has increased in Kenya as a result of the drought, will desperate families be marrying off daughters in exchange for food. The victims are known as "drought-brides" (<https://www.girlsnotbrides.org>)

The drought has increased the vulnerability of women and girls to sexual and gender-based violence (GBV), as they walk long distances to access food, fetch water, and find wood fuel. The situation has contributed to the interruption of livelihoods that leads to an increase in the practice of harmful traditional practices, and sexual exploitation, including forced marriages of young girls as a way to generate income or as a preventive measure to protect girls from violence. The movement of communities in search of pasture and water creates a barrier to accessing gender-based violence (GBV) services as they move further away from the health facilities. This heightens their vulnerability to unplanned or unwanted pregnancies and early or forced marriage.

People in need and targeted for assistance

The Protection Sector estimates that 411,583 women of reproductive age, including 7,820 (1.9 per cent) women with disabilities, and 189,962 adolescent girls (10-19 years) are affected by the drought in the eight selected counties and a total of 8,232 women of reproductive age are at risk of sexual violence (rape). The affected population also includes 63,321 sexually active adult men and 174,131 adolescent boys (10-19 years).

Sector Response Strategy

County capacity for prevention and response to gender-based violence has been constrained by the COVID-19 pandemic. Many of the healthcare workers in the drought-affected counties are also involved in the COVID-19 response, including vaccination outreaches, meaning that they are already stretched. GBV coordination structures in the respective counties require strengthening to ensure mainstreaming of gender equality and GBV measures in the entire drought response in the country.

People at risk of gender-based violence are in need of scaled up and sustained access to clinical management of rape services (CMR), psychosocial first aid (PFA), and supplies such as dignity kits that protect their bodily autonomy and dignity. Most GBV survivors will require access to livelihood support in the form of cash voucher transfers in order to cushion them against possible cases of sexual exploitation and abuse, and harmful practices such as child marriage as households strive to alleviate the impact of the drought on food security.

The Gender Based Violence component of the Protection Sector will prioritize interventions that are lifesaving, promote integration of actions into other drought response measures and build the agency of individual and communities to mitigate the effects as the progressively develop resilience. To that end, the strategy will focus on:

- ensuring capacity for clinical management of rape services through training of health personnel and procurement of the relevant Inter-Agency Reproductive Health (IARH) kits;
- provision of mental health and psychosocial support services;

- provision of dignity kits and promoting access to cash transfer;
- mapping, establishment and support to referral pathways and services; and
- access to shelters and safe houses.

Actions at the community level will also strengthen surveillance to ensure harmful practices such as female genital mutilation and child marriage are monitored and prevented. The GBV sector will strengthen coordination of protection aspects within the sector and with other sectors such as Child Protection; Health; Food Security and Livelihoods; and WASH. The sector will coordinate with these other sectors to ensure appropriate levels of the GBV / Gender marker are attained and GBV is mainstreamed in accordance with IASC guidelines, especially in integrated medical outreaches. The sector will engage with other sectors to ensure assessments and surveys take protection

issues into account while promoting the participation of all sectors in periodic safety audits, including deliberate focus on sexual exploitation and abuse (SEA). The sector will strengthen demand for services through messaging initiatives at the community level using multiple media channels, including social media. Community and cultural sensitive media strategies will be used to ensure the response to available services is adequate.

UNFPA will lead the GBV sub-sector response in accordance with its global mandate as the GBV Area of Responsibility. The organization will work with other actors within the UN, government bodies such as the State Department for Gender and the National Gender and Equality Commission, the Kenya Red Cross Society, local women led organizations, organizations that focus on disability and other non-state actors, including those in the private sector to ensure no one is left behind.

Context of the crisis in the sector

The recent integrated phase classification for acute malnutrition conducted in July 2021 revealed a critical nutrition situation in Garissa, Wajir, Mandera, Samburu, Turkana, North Horr and Laikipia sub-counties in Marsabit County and Tiati in Baringo County, where global acute malnutrition (GAM) rates are above the emergency threshold of 15 per cent, while Tana River and West Pokot Counties were classified in serious phase (GAM rates between 10 and 14.9 per cent). The main drivers of acute malnutrition are poor dietary intake with reduced milk production and consumption which forms the main diet for children in arid areas. The nutrition situation is projected to worsen in Turkana, Samburu, Mandera, Garissa, Wajir, and North Horr and Laikipia given the projected worsening food security situation and may further worsen if the 2021 short rains perform poorly.

Sector response strategy

The Nutrition sector response strategy is focused on four key priority areas:

1. Enhanced timely detection and referral of acute malnutrition cases;
2. Enhanced access to integrated essential health and nutrition services;
3. Enhanced social behaviour change communication on maternal infant and young child nutrition;
4. Strengthened sector preparedness and response capacity through enhanced surveillance, coordination, and information management in the most affected counties.

POPULATION CATEGORY	PEOPLE IN NEED	PEOPLE TARGETED
Under-five Moderate Acute Malnutrition (Including Kakuma and Dadaab)	ASAL 368,985 Refugee 29,880	ASAL 184,492 Refugee 26,892
Under-five Moderate Severe Acute Malnutrition (Including Kakuma and Dadaab)	ASAL 96,242 Refugee 11,800	ASAL 72,181 Refugee 10,620
General Population and Caregivers of children 0-23 months for Maternal infant and young child nutrition messaging	2,526,811	2,021,449
Under-fives Vitamin A supplementation	5,685,326	4,548,261
Pregnant and lactating women MAM	93,348	93,348
Community volunteers		58,014
Health workers		6,000

There is an urgent need to scale-up access to services through various strategies, including rapid case detection through mass screenings, as well as strengthened support for household-level screening through the Family MUAC approach, and early warning early action system strengthening through the IMAM surge approach. Integrated outreaches will be key to ensure those in hard to reach areas have access to a package of high impact nutrition interventions, including micronutrient supplementation and treatment of acute malnutrition. The sector will seek to ensure that strategies, such as maternal, child and nutrition weeks ('Malezi Bora') are supported as a means to ensure continuity of essential services during the response period as part of strengthening routine services while enhancing population level nutrition education (households and community) through broadcast messaging. Further, the sector will deploy surge teams for rapid response when and if necessary, in hotspot areas.

The nutrition programme is currently faced with extensive stock outs of essential nutrition supplies and as such, procurement, and distribution of ready to use therapeutic and supplementary feeds will be prioritized. This is to further complement government efforts at securing the supply pipeline which are commendable to date. Complementary efforts to ensure strengthened coordination and linkages will be deployed to ensure that synergy is achieved, and targeting is done efficiently to avoid duplication and maximize resources available for response across the sector. Further, coordination mechanisms will be leveraged to anchor discussions on government long term support for key strategies like outreach that are predominantly externally funded. Ensuring continued surveillance and information management will be prioritized to ensure that data is readily available and continues to inform the scale up plan.

Objective	Activity	2021 Sector response budget	
		USD	KES
To prevent deterioration in nutritional status of populations affected by emergencies	Scale up delivery of essential nutrition services (High Impact Nutrition Interventions) including outreach and mass screening	1,907,183	210,000,000
	Supplies – MAM and SAM	17,434,867.88	1,919,753,302
	Blanket supplementary feeding – 3 months' supply	19,202,630	2,054,681,410
	Surveillance and Monitoring (Surveys, Tana River and Isiolo)	54,490.96	6,000,000
	Coordination and Technical Assistance / Oversight	31,786.39	3,500,000
TOTAL		38,630,958.96	4,193,934,712

4.7 WASH

PEOPLE IN NEED	PEOPLE TARGETED	REQUIREMENTS (US\$)	PARTNERS	PROJECTS
2.2M	835K	\$20.3M	24	111

Context of the crisis in the sector

Water scarcity is a reality in the Arid and Semi-Arid Lands (ASAL) region of Kenya: the majority of the open surface water sources (water pans, dams) in these counties have dried up since there was no recharge due to the failed rains and, in some water pans, due to siltation during previous seasons. The distance that people must walk to water sources has already increased to about 50 per cent and the average household hauling distance for water increased in August-September 2021, with some pastoralists walking 15 to 20 kilometers to and from water points.

Tensions and conflict over limited access to water resources are increasing as pastoralist communities are moving in search of water and pasture, both within the traditionally negotiated areas and outside of these locations. Reduced access to, and contamination of, water has put most households at risk of waterborne diseases. The resilience of households in ASAL areas depends on the reliability of their water supplies, which is currently at crisis.

People in need and targeted for assistance

More than 2 million people are in need of urgent Water, Sanitation and Hygiene (WASH) support as a result of the drought, across the following 14 Counties: Marsabit, Mandera, Garissa, Wajir, Kilifi, Tana River, Lamu, Samburu, Kitui, Laikipia, Makueni, Isiolo, West Pokot, Baringo and Kajiado. This burden falls largely on women and impacts WASH needs.

As a sector, WASH proposes to target all the 14 Counties and will require \$15,584,426 to meet the needs of 1,113,900 people targeted for WASH assistance.

Sector response strategy

The primary objective of the WASH sector is to improve access to safe water and hygiene through the provision of NFIs, including water storage utensils for households, water storage for communities and hygiene materials like soap and disinfectants. NFIs will be provided to the most vulnerable households, together with awareness-raising sessions on hygiene. At community-level, WASH partners will improve access to safe water for personal and domestic use through the installation of plastic water tanks of 5,000 liters capacity, which will be connected through regular supply sources. Non-functional water

supply systems will be assessed, and immediate rehabilitation of targeted systems will be ensured in the shortest possible time to increase the availability of water for people. A phased approach will be adopted to ensure, immediate, medium-term (3 months) and longer-term (one year) water supply rehabilitation plans. Spare parts will be procured and supplied through local markets to transfer the non-functional water supply systems to function.

During the first three months of the relief phase, a comprehensive assessment will be conducted by the WASH sector to scope the scale of the work to be completed in the next year. Currently, there are several partners working in the ASAL region for provision of water and sanitation and some are implementing strong community resilient programs. UNICEF, UNEP and UNESCO are conducting Water Security Assessments in ASAL and UNICEF is identifying deep aquifers for sustainable water systems in ASAL. This evidence will be available to design projects for longer term and sustained benefits of communities that face regular bouts of droughts and floods and lose their services.

Under this Flash Appeal, UNICEF, Kenya Red Cross, World Vision, ACTED, VSO, Catholic Relief Services and their partners will work together to protect children and women from the impacts of the drought and ensure that they have access to safe water, WASH non-food items (NFIs) and hygiene needs. Partnership with country governments and local civil society organizations will ensure targeting and coordination reach the most vulnerable communities and families. County government, health, and water departments, along with Water Service Providers (WSPs), will be on board to coordinate the service delivery. Coordination will be carried out through the platform led by the Ministry of Water, Sanitation and Irrigation at National level and will be co-chaired by the Ministry of Health and UNICEF. All partners involved in the delivery of services will report on progress at the coordination platform.

The WASH sector will ensure close coordination with Nutrition, Food Security and Health for complementarity and integration for stronger impact of investments. The WASH sector will ensure that all schools and health facilities, including therapeutic feeding centers, in the target areas have water supply and hygiene services. Joint targeting with the other sectors will enable this.

Part 5

Annexes

ELNOUR DISPENSARY, WAJIR COUNTY

"I have not feed my children this morning and I don't know if I will have something on the table this evening. Many of my livestock died because of the drought and the few remaining are in a very bad condition I can not sell them in the market, life is becoming very hard," said Zeinab.

How to Contribute

Contribute towards (Country name) Flash Appeal

Donors can contribute directly to aid organizations participating in the international humanitarian coordination mechanisms in ASAL counties of Kenya, as identified in this Flash Appeal.

Contribute through the Central Emergency Response Fund

CERF is a fast and effective way to support rapid humanitarian response. CERF provides immediate funding for life-saving humanitarian action at the onset of emergencies and for crises that have not attracted sufficient funding. Contributions are received year-round

www.unocha.org/cerf/donate

About

This document is consolidated by OCHA on behalf of the Humanitarian Country Team and partners. It provides a shared understanding of the crisis, including the most pressing humanitarian need and the estimated number of people who need assistance. It represents a consolidated evidence base and helps inform joint strategic response planning.

The designations employed and the presentation of material in the report do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries

FLASH APPEAL
KENYA

Get the latest updates

OCHA

OCHA coordinates humanitarian action to ensure crisis-affected people receive the assistance and protection they need. It works to overcome obstacles that impede humanitarian assistance from reaching people affected by crises, and provides leadership in mobilizing assistance and resources on behalf of the humanitarian system.

www.unocha.org/rosea

[twitter:@unocha_rosea](https://twitter.com/unocha_rosea)

Humanitarian RESPONSE

Humanitarian Response aims to be the central website for Information Management tools and services, enabling information exchange between clusters and IASC members operating within a protracted or sudden onset crisis.

www.humanitarianresponse.info

**Humanitarian
InSight**

Humanitarian InSight supports decision-makers by giving them access to key humanitarian data. It provides the latest verified information on needs and delivery of the humanitarian response as well as financial contributions.

www.hum-insight.com

Financial
Tracking
Service

The Financial Tracking Service (FTS) is the primary provider of continuously updated data on global humanitarian funding, and is a major contributor to strategic decision making by highlighting gaps and priorities, thus contributing to effective, efficient and principled humanitarian assistance.
