Focused on impact

ISS provides high quality research, policy advice and training to help secure Africa’s future

The Institute for Security Studies (ISS) continued its evolution beyond a traditional research and policy organisation to one that has a direct impact on human security in Africa.

**Collaborative approach**

In 2018 the ISS signed agreements with the African Union and Ethiopia’s Ministry of Foreign Affairs, which demonstrate our commitment to partnerships with governments and international organisations. Our engagement with Ethiopia reflects the country’s growing role in stabilising the Horn of Africa.

It is only by sharing ISS insights with decision makers that we can achieve impact

We further developed the ISS relationship with the South African government and in 2018 worked with diplomats to help prepare for the country’s two-year term on the UN Security Council. We expanded our technical support to the police and prosecuting authorities, and to violence prevention initiatives.

**Anticipating future challenges**

This annual review shows the value of our long-term security and development forecasts, which allow ISS to detect tomorrow’s challenges today. During 2018 threats and opportunities were identified on issues as diverse as demographics, industrialisation and climate change. ISS highlighted neglected challenges in Central Africa and their potential impact on neighbouring countries.

ISS guides African responses to global challenges including populism, migration, corruption and organised crime. Among our new focus areas is emerging technologies for which there is no African policy, despite their enormous potential impact.

**From research to action**

ISS produced high quality research and evidence-based policy analysis across Africa. This is the starting point in our theory of change and the foundation of our work.

But it is only by sharing ISS insights with key decision makers, and providing constructive support to governments and civil society that we can build a secure and prosperous continent.

Our impact in 2018 was achieved through the sustained effort of ISS staff and the ongoing commitment of our partners and funders to human security in Africa.

Anton du Plessis
Executive Director, ISS
What gives ISS the edge?

- **We are African**
  ISS is sensitive to the African context and responds to Africa’s needs

- **We collaborate**
  ISS supports partners who are able to improve policy and practice, and bring about change

- **We build trust**
  Governments and civil society see ISS as credible, independent and constructive

- **We harness our networks**
  African and global connections enable ISS to influence debates and decisions

- **We do relevant research**
  Evidence-based analysis underpins ISS policy advice, training and technical support

How we work
Tackling the enduring threat of violent extremism

As terrorism adapts and spreads, ISS provides evidence and training to enable effective responses

Changing shape of Boko Haram threat

Ground-breaking ISS field research revealed the continued threat that Boko Haram poses in the Lake Chad Basin region, despite the ideological split in the terror group in 2016. Boko Haram has ravaged north-east Nigeria for the past nine years and in 2014 expanded its violence into the Lake Chad region (Nigeria, Niger, Chad and Cameroon). The splintering of Boko Haram means that two different entities with divergent operating methods must now be confronted.

Analysis to support G5 Sahel Joint Force

ISS analysis helped the G5 Sahel Joint Force respond more effectively to challenges in the Liptako-Gourma region on the borders of Mali, Burkina Faso and Niger. ISS insights, based on field research in the area where the Joint Force operates, were presented to civilian and military leadership. ISS was the only policy organisation invited to participate in a meeting of all partners that provide training to the Joint Force.

The analysis enabled ISS to recommend strategies for each Boko Haram faction

ISS collaborated with two Central African research partners in the USAID commissioned study. The research showed that rather than weakening the group, the split presents new risks in the long term. ISS advised that certain counter-terrorism policies, which may achieve short-term gains, are counter-productive in the long run and threaten the livelihoods of the local population. The research also enabled ISS to recommend strategies for each Boko Haram faction.
ISS research in Liptako-Gourma was discussed at

- 10 workshops
- 32 briefings
- 42 media interviews
Counter-terrorism training by Interpol and ISS has improved investigations and successful prosecutions of terrorist suspects in the region

Gedion Kimilu, head of Interpol’s regional bureau, Nairobi

**Gender and violent extremism**

ISS is studying the role of gender in extremism and will use the findings to guide policy. Men are usually perceived as terrorist leaders and combatants, a narrative that marginalises women’s role. Understanding the presence of women in these groups, and why they join or do not join, helps develop more effective prevention strategies.

An ISS team from Dakar conducted empirical research in Mali and Niger as part of a consortium of 15 projects supported by the International Development Research Center. Women could contribute to counter-terrorism initiatives if governments included them in policy development, the ISS found.

**Surveying local projects in West Africa**

ISS research discussed on the margins of the 2018 UN General Assembly called for improved measurement of what works to prevent terrorism. A survey of 133 projects in Mali, Chad, Burkina Faso, Nigeria, Cameroon and Niger showed that many do important work in tough conditions but lack long-term funding and hard evidence of how best to confront extremism.

ISS advised that projects run by local activists are likely to be the most effective at preventing violent extremism. Governments must tackle deep structural issues that make communities vulnerable to extremism, while donors should ensure human rights violations are not justified under the guise of counter-terrorism.

Understanding men and women’s role in violent extremism will guide responses to a fast-expanding security crisis

Jeannine Ella Abatan, Researcher
ISS Dakar
Building a corps of dedicated counter-terrorism experts

ISS training in 2018 helped African police understand and combat terrorism, and investigate terror cases. The training covers national and international laws, extradition, state-sponsored terror, counter-intelligence, biological weapons and evidence collection.

ISS training is based on a comprehensive counter-terrorism curriculum and deep working relations with African police and Interpol across the continent. A key example is the ISS’ 10-year relationship with the East African Police Chiefs Cooperation Organisation (EAPCCO).

At EAPCCO’s 20th anniversary in September 2018, ISS received a special commendation for its support in detecting and combating terrorism.

EAPCCO’s counter-terrorism training manual, developed by ISS, has been adopted by police training schools in the region. ISS helped set up EAPCCO’s permanent counter-terrorism committee and supported its two new centres of excellence for forensic science in Khartoum, and counter-terrorism in Nairobi.

Extremism spreads to West Africa’s coastal states

Until 2013, terror attacks were largely limited to Mali. They have since expanded into Niger and Burkina Faso, and the risk for other coastal states is rising.

In May 2018, ISS with the Conseil de l’Entente and Switzerland’s Department of Foreign Affairs Human Security Division developed a shared understanding among government early warning planners and civil society on preventing extremism in the coastal states.

The ISS convened a similar meeting in Cotonou, in partnership with Benin’s Agency for the Integrated Management of Border Spaces.

Lessons from Africa for global counter-terrorism

ISS briefed UN Security Council members in November 2018 on the G5 Sahel Joint Force. ISS experts focused on the evolution of extremism, local views about security interventions, and exit strategies for those who want to leave extremist groups.

ISS briefed a special meeting of the UN Security Council’s counter-terrorism committee in December 2018 on foreign terrorists and returning fighters.

ISS analysis of youth marginalisation as a driver of violent extremism was discussed at a Human Rights Council side event in Geneva in March 2018.
Africa’s security and development choices

ISS forecasts help policy makers and development partners set the course for a prosperous continent

Turmoil in Central Africa

ISS analysis drew attention to neglected political, economic and demographic challenges in Central Africa and their potential impact on neighbouring countries. Findings were launched in Cameroon’s capital Yaoundé in February 2018, in collaboration with the local African Centre for International Economic, Strategic and Diplomatic Studies.

Central Africa has more corruption and less democracy than elsewhere in Africa

The study compared countries in the Central African Economic and Monetary Community (CEMAC) with other African political or economic blocs. ISS findings explained the persistent challenges in a region with more corruption, less democracy and weaker governance than other parts of Africa.

Riots and protests have increased in all six CEMAC states since 2012, and their economic outlook is bleak following a decline in commodity prices. By 2040 the population will swell by 75% to more than 90 million people, with the working age population set to double.

Socio-economic problems are compounded by political leaders who cling to power and repress opponents. Security challenges include the threat of Boko Haram, piracy in the Gulf of Guinea and instability in the Central African Republic.

ISS advised that investment is needed in the agricultural and environmental sectors, and in building regional transport infrastructure. State capture and poor governance by entrenched and aging regimes must be directly confronted.
Central Africa in 2040

> 90 million people

26 million living in extreme poverty

18 million without piped water
Charting Africa’s long-term future

ISS forecasts on how population growth, climate change and industrialisation will affect Africa were discussed at briefings in South Africa, Kenya, Ethiopia, Netherlands, Belgium and Germany.

Average economic growth rates in Africa are too slow and population growth rates too high to enable a rapid reduction in poverty. ISS forecasting showed that most African states will only benefit from a demographic dividend by 2050 or later. To improve development outcomes, political leaders must deal with the constraints that high fertility rates place on income growth.

At current fertility rates, Africa needs decades of sustained growth to reduce poverty

ISS analysis showed that agriculture is more effective at reducing poverty than other sectors, but manufacturing can transform productivity and induce rapid economic growth. Africa is home to some of the world’s harshest climates and most vulnerable populations. Global warming will constrain the positive effects of industrialisation and Africa’s demographic dividend.

It was a privilege to have you with us for our retreat and to benefit from your brilliant presentation

Smail Chergui, AU Commissioner for Peace and Security
Violence and conflict forecasts

Africa’s violence and conflict trajectories were discussed at several meetings of the continent’s leaders, including the Africa Union’s (AU) Peace and Security Council, the AU’s High-Level Retreat of Special Envoys, Mediators, and other Senior Officials in Accra, Ghana, and the Dakar International Forum.

ISS data showed that fatality rates in several countries are declining. Riots and protests are however increasing and Africa still faces substantial non-state conflict. ISS advised the AU and African leaders to prioritise service delivery, fair elections, manufacturing and agriculture, and rule of law that serves the people not the president.

ISS identified seven main drivers of violence in Africa, including poverty and population structure. Rapid population growth is outpacing social and economic improvements, and at current fertility rates Africa needs decades of sustained growth to significantly reduce poverty.

Development strategies to secure Kenya’s future

New data on Kenya’s development and economic growth scenarios was discussed with development agencies, the Kenyan government, academics and regional organisations in Nairobi. The ISS study was done for the Kenya Business Guide with funding from the Hanns Seidel Foundation and GIZ.

The country is a continental leader in information technology and has well-developed health and education systems, but has a significant infrastructure deficit. Corruption constrains Kenya’s human development progress and economic growth prospects. Its fast-growing young and increasingly urban population complicates efforts to expand access to basic services and may serve as a spark for social instability.
Maritime security is key to Africa’s prosperity

ISS is a vital resource for African and global policy makers seeking to build the blue economy

**Putting oceans on Africa’s policy map**

Technical support and guidance from the ISS brought Africa’s maritime potential into the mainstream of continental policy and planning. Africa’s vast maritime domain is abundant with food and energy resources, and the 30,500 km coastline is ripe for trade infrastructure and tourism. It is a natural asset that needs protecting.

In 2018 the ISS continued to support the African Union (AU) in its implementation of Africa’s Integrated Maritime Strategy (AIMS 2050). The innovative strategy needs leadership backing and capacity to take the next steps. ISS is positioning the blue economy at the centre of Africa’s economic and social transformation under the framework of the AU’s Agenda 2063.

Maritime growth which is well integrated with land infrastructure provides multiple benefits in jobs, logistics and skills development. And because neither fish nor pirates respect international boundaries, maritime policies are by their nature cooperative and transnational. The ISS is consulted by the UN, AU and regional bodies seeking research insights and policy guidance. The International Maritime Organisation sees the ISS as a vital African partner.

**Africans need greater control over the continent’s ocean resources**

Maritime security is key to maritime prosperity. Timothy Walker, ISS Senior Researcher on maritime, presented at United States-funded naval exercises off Africa’s east coast, where African sailors worked with international crews to build the continent’s seaborne strategy and defences. The aim is to see greater African control and governance over African waters and the sustainable development of ocean resources.

**Thank you for a mind-opening discussion. I needed to be cured of sea blindness and will be looking differently at oceans in future**

Prof Maxi Schoeman, University of Pretoria and ISS Trustee
Great economies are built on trade, and 90% of African imports and exports move by sea
MARITIME SECURITY

Award of excellence
ISS received the African Union Special Award of Excellence in recognition of the ongoing partnership, that started in 2015, between ISS and the AU Commission in promoting Africa’s blue economy.

Supporting IGAD
ISS worked with East Africa’s Intergovernmental Authority on Development (IGAD) to implement a regional maritime security strategy, and ran events to build maritime awareness and capacity among IGAD member states.

Indian Ocean collaboration
ISS is working with the South African government in its capacity as current chair of the Indian Ocean Rim Association (IORA). At South Africa’s request, ISS facilitated collaboration between the AU and IORA. ISS helped establish an IORA maritime safety and security working group and organise the IORA Indian Ocean Dialogue.

Global exposure for African maritime issues
In October 2018 the ISS briefed key stakeholders in Europe about African maritime priorities and security challenges, including the International Maritime Organisation and foreign affairs ministries in the United Kingdom, Denmark, Norway and Germany.

What happens at sea isn’t visible to voters or policy makers on land – that must change
Timothy Walker, Senior Researcher
ISS Pretoria
Knowing what drives conflict is key to lasting peace

ISS insights guided conflict prevention, and scores of police were trained for Africa's peace operations

Supporting AU conflict prevention

During 2018, ISS supported the African Union (AU) in its development of policy and strategy on conflict prevention, early warning, post-conflict reconstruction and development, and ‘silencing the guns’.

ISS helped facilitate the annual internal review of the Conflict Prevention and Early Warning Division, which assessed options for better alignment with the AU’s 2016-2020 African Peace and Security Architecture Roadmap.

ISS also worked with the Crisis Management and Post-Conflict Reconstruction and Development Division, aiming to enable implementation of policy developed in 2006. Technical assistance by the ISS supported the drafting of a five-year workplan, which was launched by the Commissioner for Peace and Security in November.

ISS also supported the AU consultative dialogue on integrating the rule of law, security sector reform, transitional justice and governance in an effort to stabilise post-conflict countries.

Africa’s peace and security policy

ISS analysis of the AU Peace and Security Council (PSC) enables policy makers, diplomats and civil society to understand the AU’s approach to managing conflict. ISS researchers based in Addis Ababa assess PSC decisions and recommend how states can support AU conflict prevention and peacebuilding efforts.

In 2018 the monthly ISS PSC Report reviewed the implications of AU institutional reforms and advised on how best to implement them. AU political affairs officers and staff from African embassies in Addis Ababa joined policy dialogues with ISS on the Nouakchott Process in the Sahel-Saharan region, and on the Horn of Africa consultation on South Sudan. ISS briefed PSC member states Nigeria and Morocco on Africa’s pressing security situations, links between migration and security, and AU responses.

I read all your PSC Reports and very often circulate them to my colleagues

Carlos Lopes, Former UNECA executive secretary and AU High Representative for Partnerships with Europe and member of AU Reform Team
Our PSC Report is the primary source on AU responses to Africa’s most critical conflicts

Liesel-Louw Vaudran, Senior Researcher
ISS Pretoria
Politics and security in South Sudan

The ISS made evidence-based suggestions to improve the durability of the peace process in South Sudan. Shortly after a fragile peace deal was signed, ISS released research on the parties to the conflict and their mediation processes.

The latest peace agreement is being implemented in a fractured environment. ISS recommended integrating smaller parties into the deal, and constructive engagement by the Intergovernmental Authority on Development (IGAD), while preventing the imposition of bilateral interests.

South Sudan’s refugees need a greater role in their country’s peacebuilding

A second ISS study, based on fieldwork in South Sudanese refugee camps in Ethiopia and Uganda, detailed the frustrations of refugees and showed why this often-overlooked group needs a greater role in peacebuilding.

ISS-TfP is a partner of choice in supporting post-conflict efforts in Africa

Dawit Yohannes, Senior Researcher
ISS Addis Ababa

Without the great support rendered by ISS and BPST-Africa our officers could not have been deployed with the right training

Gashu Alemayehu, Assistant Commissioner of Police and Vice-President Ethiopian Police University College for Training
Training police for peace missions

The ISS prepares African police for United Nations (UN) and African Union (AU) peace missions. Police have a fundamental role in peacebuilding, and require specialist training before deployment to complex environments where they develop local policing capacity, protect civilians, and establish the rule of law and human rights.

ISS Training for Peace (ISS-TfP) experts have a long history of preparing African police for peace missions, based on a 2015 training needs assessment in the Somali capital Mogadishu. They worked with the AU to develop a pre-deployment training package for police on the African Union Mission in Somalia (AMISOM).

After the successful roll-out of the training, the AU asked ISS-TfP to develop a similar generic course for police deploying to other African peace operations.

2018 training courses

- At the request of the Ethiopian Federal Police Commission, ISS-TfP and the British Peace Support Team – Africa prepared police for deployment to missions in South Sudan and Sudan. All those trained were deployed to UN missions shortly after the course. A similar training course was provided for police from Ghana, Kenya, Nigeria, Sierra Leone, Uganda and Zambia.

- A three-week ISS-TfP course in Nairobi for 30 police trainers from six countries was delivered in preparation for deployment to AMISOM.

- ISS ran two courses for the Eastern Africa Standby Force. The first helped trainers to understand gender mainstreaming and how to deal with sexual and gender-based violence on missions. The course was validated by an AU expert from the Special Envoy of the AU Chairperson on Women, Peace and Security.
South Africa on the Security Council
ISS is helping to strengthen South Africa’s peace, security and development efforts in Africa. In June 2018, South Africa was elected for the third time to the UN Security Council. ISS supported the country’s preparations for its 2019-20 term. Research with more than 60 diplomats, government officials and experts informed this work.

ISS was one of only two civil society organisations invited to brief the council’s non-permanent members in a meeting organised by South Africa and Sweden.

ISS support helps South Africa navigate complex Security Council dynamics

Elections and violence in Zimbabwe
The ISS was a leading independent source of early warning and analysis as Zimbabwe prepared for its July 2018 election. ISS advised on how countries like South Africa can play a constructive role in Zimbabwe’s recovery.

ISS forewarned of the social unrest that would follow Zimbabwe’s economic slide, manifesting in strikes and demonstrations in November and December 2018. ISS analysis published ahead of the Motlanthe Commission Report into post-election violence correctly predicted its findings.

Peacebuilding partnerships in Liberia
Based on field research, ISS advised that both African and international partners should help build lasting peace. Better links were needed between development and peacebuilding plans, and the role of the Economic Community of West African States, the African Development Bank and neighbouring states should be explored.

In May 2018, ISS hosted a meeting in Monrovia of donors, regional bodies, governments, Liberia’s Peacebuilding Office and the AU to discuss options.

Supporting the AU in the Sahel
ISS Dakar worked with the AU to prepare for the first meeting in a consultative process to revise the AU’s Sahel strategy. ISS helped delegates understand the challenges and created a space for information sharing among the UN, the G5-Sahel and the West African Economic and Monetary Union.

ISS also helped plan and deliver a series of colloquiaums on preventing radicalisation. The series was initiated by the AU Mission in the Sahel (AU MISAHEL) and the G5 Sahel, with support from the Swiss Confederation.

The ISS is a technical partner whose support is invaluable to us
Pierre Buyoya, AU High Representative for Mali and the Sahel and President, AU MISAHEL
DRC and the Great Lakes

ISS expertise is sought by key players working to resolve the electoral impasse in the Democratic Republic of the Congo (DRC). ISS analysts contributed to high-level events on the DRC in 2018, including the fifth anniversary evaluation of the Peace, Security and Cooperation Framework. ISS was one of three independent organisations that participated.

Stephanie Wolters, Head of the ISS Peace and Security Research Programme and a Great Lakes expert, taught at the prestigious Rift Valley Institute’s annual Great Lakes course, attended by diplomats and regional humanitarian actors.

Gulf states in the Horn of Africa

The ISS facilitated debate about the challenges posed by Gulf states’ growing interest in the Horn. At the request of the Ethiopian Ministry of Foreign Affairs, ISS’ Addis Ababa team held a full-day closed dialogue for 40 senior officials and external experts, followed by an open seminar.

Economic opportunities and security interests have prompted fresh engagement in the Horn by states like Saudi Arabia and the United Arab Emirates. The coastlines of Somalia, Eritrea, Sudan and Djibouti are of strategic value to Gulf States’ role in Yemen’s bitter conflict, and for the wider projection of influence in Africa.

African states are also under pressure to choose sides after the diplomatic and economic isolation of Qatar, which other Gulf states accuse of supporting Iran and Islamist movements. Delegates agreed on the need for a long-term outlook that scrutinises the commitment and interests of states looking for a foothold in Africa.
Migration is a human rights and development issue

ISS provides evidence that informs African migration governance and European responses

Changing migration thinking and policy

The ISS guides the response to African migration by the continent’s leaders and the international community. It promotes the management of migration as a human rights and development issue rather than a security concern.

In 2018 the ISS brought African views into the global migration debate. It challenged misperceptions, showing that 80% of African migration is within Africa and not to Europe. Eight of the 10 countries hosting the most refugees, relative to their economic size, are in Africa.

ISS fieldwork showed that migrants can fill labour and skills shortages in countries with a shrinking working age population. Migrants don’t increase security risks or justify severe military or criminal justice responses.

ISS participated on a South African population policy committee looking at migration and urbanisation and helped write the governance section of the Southern African Development Community’s migration policy. ISS also sits on the African Union’s working group on migration.

A series of ground-breaking ISS reports looked at the dynamics of migration in the Horn of Africa, freedom of movement in southern Africa, and Ethiopia’s progressive refugee policy.

ISS also provided policy input to African governments on implementation of the Global Compact for Migration and its links to the United Nation’s sustainable development goals.

There is no evidence that migrants are a particular security risk

ISS experts contributed to the security component of the International Organisation for Migration’s first Africa Migration Report. ISS brought African insights to the Red Cross World Disasters Report and facilitated discussions on migration between Pan African and European parliamentarians.

Migration is an opportunity to manage, not something that needs heavy-handed security responses

Ottilia Anna Maunganidze, Head of Special Projects, ISS Pretoria
ISS promotes a gender focus in Africa’s migration debate

Gender and migration

Women are moving more than ever, often migrating independently to escape war or fulfill economic needs. ISS research in South Africa found that African women migrants face xenophobia, racism and misogyny. Restrictive policies disproportionately impact women and children, and women migrants are vulnerable to violence and trafficking. ISS recommended applying rights-based gendered approaches to migration policy.

By talking to migrants and refugees, we bring their stories into the policy process

Tsion Tadesse Abebe, Senior Researcher
ISS Addis Ababa
Freedom of movement in SADC

The ISS analysed migration dynamics and policy implications of a regional migration framework for the Southern African Development Community (SADC). States in the region favour securitised approaches. Sound migration management is impeded by economic disparities between states, and a lack of political will and reliable data. ISS showed that a SADC framework aimed at regional integration and freedom of movement would enable states to manage migration flows, protect migrants’ rights, enhance economic development and combat transnational crime.

Support for Ethiopia’s refugees

The ISS called on the international community to increase support for refugees in Ethiopia, which hosts the world’s sixth largest refugee population. Ethiopia recognises most asylum seekers from neighbouring countries and is the second largest refugee-hosting country in Africa.

ISS research showed that Ethiopia’s refugee policy put the country in a position to become a world leader, but underfunded camps result in poor conditions including a lack of basic and social services.
Confronting endemic violence in South Africa

Using innovative research and methods, ISS is creating safer communities and improving police accountability

Future of violence prevention

The ISS is a founder and coordinator of an innovative group of government, academics and civil society organisations looking for long-term solutions to violence. The Violence Prevention Forum brings diverse voices into a consultative environment to discuss evidence-based approaches. Members include Save the Children SA, the UN Children’s Fund (UNICEF) and government departments responsible for healthcare, social development, policing, education and performance monitoring.

With skills and a willingness to learn, a focused network is tackling violence

Participation by the Treasury has resulted in new budget allocations for preventing violence against women and children. The forum acts as a springboard for new initiatives, including the SA Parenting Programme Implementers Network, and a campaign to raise awareness about violence against children ahead of the 2019 elections. ISS and its partners pool expertise in research, capacity building and networking to build consensus about what works in practice. They are developing community-based projects that can be scaled up nationally.

We need leaders who believe in, and call for, an end to violence against children

Diketso Mufamadi, Researcher
ISS Pretoria
Safer schools
ISS Senior Research Fellow Dr Chandré Gould presented the keynote address at government’s National Schools Safety Summit. She called for children’s voices to be heard in violence prevention discussions and for more sustainable funding for services. Programmes to encourage positive parenting and prevent violence should be extended to all government employees, ISS said.

In SA
1 in 3 children experiences violence and 1 in 5 has been sexually abused
**Prosecutions and police reform after Marikana**

Six years after the Marikana massacre, ISS researchers revealed damning new details about police atrocities and led calls for prosecutions and police accountability. The August 2012 incident saw police shoot dead 34 striking mineworkers at Marikana platinum mine – the worst killings by police since the end of apartheid.

New ISS research, based on photographs, statements from police and surviving miners, and ballistic and forensic evidence, concluded that most of the shootings were not justified, and were motivated by the desire to punish the strikers for killing two policemen. ISS said police commanders who authorised the killings should be a priority for prosecution.

**Guiding crime and corruption policy**

The ISS helped South Africa’s ruling African National Congress (ANC) develop its policy on dealing with crime and corruption. A senior ISS team addressed the party commission at a conference of more than 600 national and provincial leaders, government ministers and officials, academics and civil society.

**Safer Western Cape**

ISS partnered with the Western Cape Department of Community Safety to design and deliver a major conference for the Western Cape government. The event united business, government and civil society in a bid to find practical solutions to endemic safety challenges. More than 50 expert speakers and 250 delegates attended including national and provincial ministers, community policing forums, local authorities, researchers and activists representing victims of violence.

**SA needs evidence-based policy and top quality police managers**

ISS advised that violence prevention should be a priority and explained the causes of poor police performance and how to remedy it. Evidence-based policy choices and the rejuvenation of police top management are needed. The ANC was urged to create a dedicated and independent investigative and prosecutorial capacity to tackle corruption. The ISS contribution prompted a lively five-hour debate among senior government and party figures.
Exposing the scope and impact of organised crime

ISS reveals the devastation caused by transnational crime networks, and how to stop them

Central and West African police team up

With technical support from the European Union (EU)-funded ENACT project, a ground-breaking agreement was adopted in June by police chiefs of Central and West Africa in Brazzaville, Republic of the Congo.

The agreement was the first of its kind and will help combat transnational threats by improving cooperation on criminal and police matters.

Representatives from committees of Central and West African police chiefs (CAPCCO and WAPCCO) were convened jointly by ENACT, CAPCCO and the Republic of the Congo government, with support from Interpol and the Central African Economic and Monetary Community. Once approved by their governments, the agreement will pit perpetrators of organised crime, terrorism and violent extremism against the combined resources of 24 countries.

ENACT then supported CAPCCO and WAPCCO to submit the draft cooperation agreement to the regional heads of state summit in Lomé, Togo in July, where the agreement was approved. ENACT was asked to assist with other technical meetings aimed at strengthening regional cooperation.

ENACT is the first to analyse the scale of organised crime across Africa

The ENACT project aims to mitigate the impact of transnational organised crime on development, governance and security. It is carried out by ISS and Interpol in affiliation with the Global Initiative against Transnational Organised Crime.

With this agreement, we replace lengthy extradition procedures and simplify collaboration in the transfer of criminals and goods

Raymond Zéphirin Mboulou, Minister of the Interior and Decentralisation Republic of the Congo
Crime syndicates and violent extremists now face the combined resources of 24 countries.
West Africa’s counterfeit drugs problem

ENACT highlighted the severe impact of counterfeit medicines in West Africa and urged governments to move the threat up their policy agenda. Fake drugs drive extensive criminal markets and cause thousands of deaths annually, yet the scale of the problem isn’t fully understood.

Substandard and fake medicines contribute to drug-resistant illness and have a tragic impact on people who need effective antimalarials, antibiotics and other treatments. The problem disproportionately affects developing countries.

Africa urgently needs an intelligence database of fake drugs

Criminal counterfeiters target Africa because it lacks the responses used in other parts of the world, including supply chain regulation, track-and-trace technology and enforcement. Corruption makes the problem worse, and the link between graft and healthcare demands closer examination.

ENACT recommendations included an overhaul of legal, enforcement and education systems driving medical supply chains. An intelligence database of fake drugs is urgently needed.

Fake malaria drugs cause approximately 158,000 deaths a year in sub-Saharan Africa
East and Central African responses

The East African Police Chiefs Committee (EAPCCO) asked ENACT for technical support in improving police cooperation on organised crime matters between East and Central Africa. Interpol secretary-general Jürgen Stock attended EAPCCO’s annual general meeting in September in Khartoum. He called for increased regional integration to counter transnational organised crime, terrorism and violent extremism.

Africa’s heroin coast

Ground-breaking ENACT research revealed the increased flow of heroin down the East African coast, and how the drug is becoming embedded in local communities. Smugglers capitalise on rapid infrastructure development with weak checks and balances on state institutions. The volume of heroin shipped from Afghanistan through East and Southern Africa has rocketed, most of it destined for Western markets.

Training for police and journalists

- Interpol delivered training on criminal intelligence analysis for police from East and Southern Africa.
- Journalists from West and Southern Africa were trained in Kampala and Senegal on organised crime and investigative journalism.
- A course on investigating financial crimes in East Africa and the Horn was held in the Seychelles, building on successful 2017 courses in Southern, West and Central Africa.
2018 in numbers

Field research was conducted in 21 African countries

1,030 Media interviews
277 Daily online articles on human security
78 Publications
59 Videos
ISS staff travelled to **29** African countries to do their work

**52** Advisory and technical support workshops

**51** Technical support projects

**52** Seminars

ISS trained people from **30** African countries

**553** People trained

**21** Training courses
Human resources, finance and communication

Professional communication and support services enable ISS to achieve impact

Human resources

The ISS is committed to integrity, equity and ethical behaviour in the workplace. Internal policies are regularly updated to ensure good governance. ISS policies govern all areas of staff conduct, as well as employment equity, harassment in the workplace, gender and ethical research. In 2018, the ISS Gender Specialist audited all policies to ensure a gender-neutral working environment.

Finance

The finance department is central to service delivery, good governance and accountability at the ISS. Finance policies, procedures and systems have been updated, streamlined and simplified. Accurate and reliable finance services are provided to staff, development partners and suppliers in a systematic manner. For the fourth consecutive year, ISS received an unqualified external audit, which was closed with no significant findings.

Communication

During 2018, ISS’ profile as Africa’s leading organisation on human security increased. Effective digital communication saw growth in views of the ISS website, social media channels and videos. The widely read online ISS Today series is our leading means of disseminating analysis on human security. It provides ISS with extensive profile – boosted by our partnership with Daily Maverick which significantly extends the reader base.

In 2018 financial support was provided to several staff for tertiary education and skills development. Opportunities for 11 interns and junior fellows were provided in 2018, including through a partnership with Trinity College Dublin. The successful ISS Dakar Junior Fellowship project funded by the IDRC continued this year, with several ISS research staff recruited from this programme.

Staff were trained on public speaking and media interviews, infographic design and internal communication. Within the Communication team, skills were developed in design, layout, photography, video editing and digital dissemination.

### Note 1: Basis of Preparation

The summarised financial statements, which include the Statement of Financial Position and the Statement of Comprehensive Income, are an extract of the audited consolidated financial statements of the Institute for Security Studies Trust for the year ended 31 December 2018. The financial statements can be obtained from the Institute for Security Studies Trust at Block C, Brooklyn Court, 361 Veale Street, New Muckleneuk, Pretoria.

The ISS Trustees take full responsibility for the correct extraction of the financial information from the underlying annual financial statements.
ISS Trustees

Amb Nicolas Bwakira held senior positions at the UN High Commission for Refugees. He has been Director for International Relations and Partnership at the University of South Africa, and the African Union’s Special Representative for Somalia.

Dr Jakkie Cilliers is Head of African Futures and Innovation at the ISS and Chairperson of the Board of Trustees. He co-founded the ISS and served as executive director until 2015.

Cassim Coovadia is Chairman of the South African Banking Risk Information Centre. He is also Managing Director of the Banking Association of South Africa and Chairman of the Johannesburg Civic Theatre.

Anton du Plessis is Executive Director of the ISS. He has advised the UN Security Council’s Counter-Terrorism Executive Directorate and the UN Counter-Terrorism Implementation Task Force.

Prof Gilbert Khadiagala is the Jan Smuts Professor of International Relations and Head of Department at the University of the Witwatersrand.

Sakumzi (Saki) Macozoma is the Non-Executive Chairman of Safika Holdings, Chairman of Tshipi e Ntle and Ntsimbintle Mining, and a board member of Volkswagen SA.

Dr Wendy Ngoma is the CEO of a management consulting firm and alumni of the INSEAD Social Entrepreneurship Programme.

Prof Maxi Schoeman is Deputy Dean of Postgraduate Studies and Ethics in the Faculty of Humanities at the University of Pretoria.

ISS Advisory Council

Amb Said Djinnit, UN Special Envoy for the Great Lakes Region and President of the Advisory Council.

Ibrahima Fall, independent consultant based in Senegal, and former UN Special Representative for the Great Lakes Region.

Mohammed Ibn Chambas, Special Representative of the UN Secretary-General and Head of the United Nations Office for West Africa and the Sahel.

Frannie A Léautier, Partner and CEO, Mkoba Private Equity Fund, Tanzania.

Susanne Luther, Director, Hanns Seidel Foundation, Germany.

Vijay Makhan, independent consultant and resource person, Mauritius.

Amb Konjit Sinegorgis, Ministry of Foreign Affairs, Ethiopia.

Prof Elrena van der Spuy, University of Cape Town, South Africa.
