

Supporting displaced communities

CCCM Sitrep - Beira

13th April 2019

Site Improvements

- Completed accessibility works in IFAPA with access ramp
- In IFP temporary relocation site, the area allocated for CFS and other services is now cleaned and prepared
- Camp Management and protection tents erected respectively
- Construction materials for distribution shed and common kitchen delivered to the site. Works planned to start by tomorrow
- 3 timber ramp accessibility points to the concrete playing space at Ifapa 2 constructed.
- In IFP IDP's were complaining that there are a lot of people who are coming to the camp for few hours only to take food and other NFI and leave to their houses at night (Requesting Protection and CM Teams to inquire into this matter and come up with recommendations.)
- Spacing between tents improved in IFP to observe standards

Relocation/Returns Movements

- Relocation plans from INGC targeting Amilcar Cabral (188HH) and Emissora (45HH).
- During CCCM meeting, Camp Management highlighted Amilcar Cabral is a sensitive site and will need strong coordination for movements.
- Relocation task force presented document introducing principled movements together with actionable support from the humanitarian community to the government.
- Coordinating with various clusters on potential returns of 250 families in Ifapa to Buzi
- During the Government meeting (COE), planned movements to Buzi and other areas was discussed where plots are being demarcated.
- Government recognized that the discussion should be more detailed and separate discussions between demarcation and movement of communities.
- Government emphasized that, contrary to what some may think, the government is committed to principled movements; however there is pressure from the population in sites to return home.
- Ministry and other directors raised questions regarding the service provision on the sites.
- Director maintains that services will be in place and that Guara Guara has access to a water source and that they have demarcated space for market and health.

- Humanitarian community stressed the need to ensure these movements are safe and that infrastructure are in place.
- The multi-sectoral visit on Monday was welcomed.

Protection

- The integrated protection services are active on site.
- There is an expectation that this service will be extended to other sites.
- Confirmation of such desks to open in Ifapa, IFP and Samora Machel in the next days.
- AVSI has gone through PSEA training for their staff
- UNHCR team visited Ifapa to informally look into the voluntariness of the impending return of those 250 families from Buzi.
- Important to note that INGC did awareness campaign to disseminate information concerning the return and whilst majority really want to return to Buzi they still had questions and appear to have full understanding on availability of assistance, basic services etc because of language barriers - approximately half of them speak a local dialect and not Portuguese.
- Need Community Engagement cluster to follow up on this asap

Health

- The set up of the tent for temporary TB consultation room in Macurungo was postponed for tomorrow morning as the place needed a bit more preparation by the community
- Recruitment process ongoing to hire TB mobile team for Beira.
- Need: strengthen collaboration and coordination with partner FHI 360 on sexual and health education to include proper condom disposal to avoid children playing with condoms as was seen today at Ifapa

WASH

- OXFAM taking lead role as WASH partner In the return area being planned in GuaraGuara and World Vision as operational partner to set up WASH services at a temporary settlement site there to receive the new arrivals from IFAPA, while planning for WASH assistance in the permanent individual household settlements.
- IsraAid also interested to do WASH activities there
- IOM WaSH and IFRC coordinating on desludging needs for latrines at Sao Pedro site.
- IOM WaSH coordinating with site planning and IFRC to install additional latrines at Sao Pedro.
