

OVERVIEW OF CERF FUNDING TO FAMINE PREVENTION

As of 14 September 2017

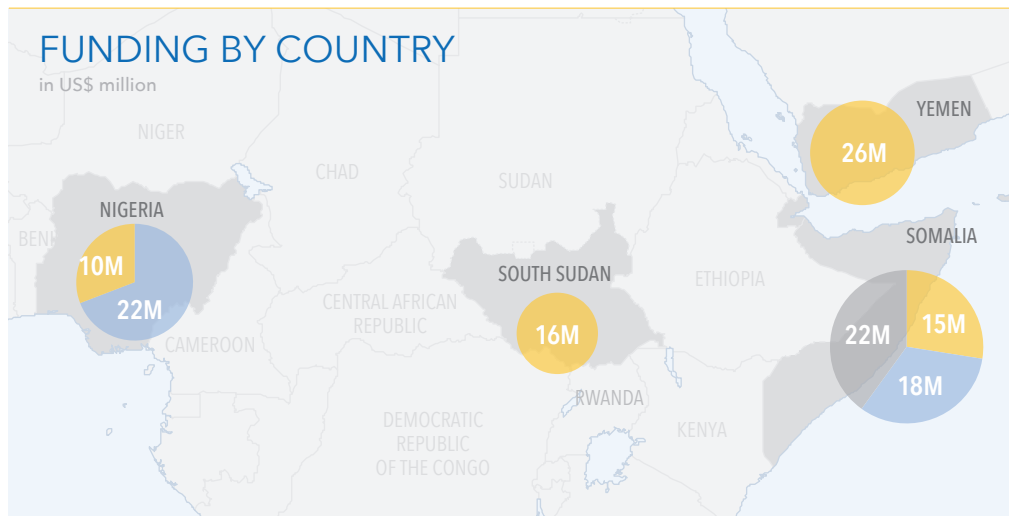

Total funding
\$128M

- **\$66M** rapid response window
- **\$40M** underfunded emergencies window (UFE)
- **\$22M** loan facility to FAO

In 2017, CERF was one of the **first responders** to warning signs in North-east Nigeria, South Sudan, Somalia and Yemen where more than 20 million people were near famine. By end-August, CERF had released nearly US\$128 million in grants and loan to support the most critical early action and life-saving activities prioritized by the humanitarian team in each country, making it one of the largest funding sources in the early stages of the response. In **North-east Nigeria**, CERF allocated \$32 million to reach some 1.3 million people affected by Boko Haram-related violence and food insecurity with emergency relief assistance and common services for humanitarian partners that enable operations. In **Somalia**, CERF released \$33 million in grants and \$22 million loan to help more than 500,000 conflict- and drought-affected people in Puntland, Somaliland and South Central. Aid agencies in **Yemen** received \$25 million for famine prevention and cholera response, including food, nutrition and health supplies, as well as the necessary logistical and security support for all humanitarian partners. In **South Sudan**, CERF allocated \$16 million to support humanitarian action in locations where famine or elevated risk of famine was declared and to attend to urgent needs in areas of new or intensified conflict.
