Seasonal Risk²

June to December is the rainy season in the Philippines when the country is vulnerable to monsoon rains and flooding. Based on historical data (1948 to 2015), this same period is also when the country is most vulnerable to tropical cyclones.

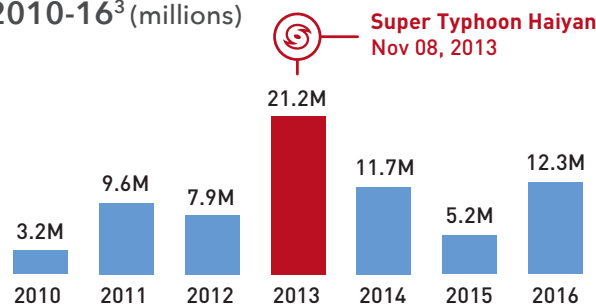

Overview

The Philippines is one of the most disaster prone countries in the world. On average, 22 tropical cyclones enter the Philippines each year, with at least six having significant humanitarian impact. From 2005 to 2015, 97 storms affected 83 million people and caused nearly 16,000 deaths. Typhoon Haiyan, which hit in 2013, was one of the most destructive cyclones ever recorded.

In Mindanao, a protracted conflict situation between Government and various armed groups is ongoing. In 2016, 251,000 people were internally displaced due to conflict and violence.
