

Report on Emergency Response and Interventions * to Confront Covid-19 Pandemic

Issued on 29 June 2020

International warnings of a catastrophic outbreak of the new Covid-19 in Yemen, whose people have been suffering from continuous war for more than five years, with great damage to the nation's health system and infrastructure.

The first case was announced on April 10, 2020 and there is a very real probable spread of the virus to local communities without being detected, and this increases the probable sudden increasing catastrophic cases of infection.

To reduce the risk of this pandemic, CSSW and partners have been for months engaged in rapid implementation of projects and emergency response programs as follows: Conduct different community awareness campaigns. Provide health facilities with support, protection and prevention equipment. Train volunteers, health workers and administrative staff on precautionary measures. Form emergency response committees and teams to ensure sustainable project services to the targeted clusters (health, relief, food, protection, water) etc., essential projects.

120 working days
March to June 2020

22 governorates
Benefiting

11 projects and response
programs implemented

7 project partners
and financiers

Awareness

1.2 million people have been accessed. Those people became aware of the situation with various forms of the media (brochures, posters, flyers, cards, and videos on social media platforms).

303 thousand people reached and educated by the campaign through local radio and wandering cars with loudspeakers

150 thousand people communicated through individual and community outreach, responding to inquiries and providing psychological support services.

189 people trained and made qualified with volunteer teams to provide awareness, community and health education services.

Health Support

53 health facilities and quarantines supported logistically with means of protection and prevention tools (sterilizers, masks, goggles, face masks, head and foot covers, spray and hygiene tools, etc.).

31 health facilities sprayed, sterilized, cleaned, and provided sterilizers for health personnel, patients, and frequent visitors.

269 health personnel trained and provided with personal protection tools to provide health care to infected or suspected case of Covid-19.

807 health personnel trained on safety procedures and provided with personal protection tools to continue providing health care services.

Precautionary measures

3.1 thousand people workers and volunteers trained on the implementation of projects (food, water, protection, relief, shelter, etc.) within the precautionary measures.

2.3 thousand people workers and volunteers provided with prevention tools and personal protection (sterilizers, masks, detergents, etc.).

755 workers and volunteers on humanitarian fields were trained to do their job remotely.

52 people have been trained, assigned and appointed as a rapid response teams, especially for the follow-up and provision of health care to workers and volunteers within CSSW.
