

Tropical Storm Density Anomaly

Forecast Start reference 01 May 2016

- < -4
 - -4 -2
 - 2 4
 - > 4
- ECMWF tropical storm density anomaly valid from June to November 2016. The colours indicate the deviation from the norm (model climate) in terms of number of tropical storm tracks.

Seasonal Forecast EFI Anomalies

June – August 2016

- ⊠ DRY (0.6 1)
- ⊠ WET (-1 -0.6)
- WARM (0.6 1)
- COLD (-1 -0.6)

Predicted anomalies in terms of warmer, colder, drier and wetter conditions. The anomalies are derived from the Extreme Forecast Index (EFI) calculated by the European Centre for Medium-Range Weather Forecasts (ECMWF) forecasting platforms.
