## EXPLANATORY NOTES:

### SUMMARY:

This matrix is prepared and published monthly, representing what happened in various sectors in the particular reference month. This indicators matrix is a step towards showing a comprehensive picture of the current situation in Gambella region and establishing a basis for initial trend and gap analysis. In order to better understand the matrix, following are the explanatory notes on some of the sector indicators:

### NUTRITION:

- Recovery rates for Severe Acute Malnutrition (SAM) in Outpatient Therapeutic Programmes (OTP) are within the SPHERE standards in all six camps (Kule, Tierkidi, Pugnido, Jewi, Pugnido 2 and Okugo) unlikely the Moderate Acute Malnutrition (MAM) in Targeted supplementary Feeding Programme (TSFP) where only Kule, Tierkidi, Pugnido, and Pugnido 2 refugees camps met the SPHERE standards. The Recovery Rate for Jewi and Okugo camps are below the sphere standard of >75% in TSFP due to increasing referral and defaulter that stand at 19% and 33% rates respectively.

### SHELTER:

- Over all the Camps partners continued finalizing the transitional shelters construction. The % of households in emergency family shelter indicates the need for continuous shelter intervention in all the camps.
- 'Transitional shelters' refers to those that have been completed with mud plastering.
- Finalising of 2016 PPAs ongoing and roll out of the new Shelter strategy with increased beneficiary participation is set for roll out this year

### WATER, SANITATION AND HYGIENE (WASH):

- The low safe water coverage levels in Kule and Tierkidi during the month was attributed to break down of some components of the system. Measures have been taken to supplement the supply through trucking and procurement of new generator equipment through UNICEF.
- Activities significantly reduced during the final week of the month due to security reasons.
- In Kule the hygiene and sanitation partner is yet to finalize the process of engaging hygiene promoters for 2016.

#### **Important note:**

The indicators for the camps are broadly administrative indicators i.e. the indicators are currently relying on total camp population (entire protected refugee population) as the denominator however due low profile observed at the entry points/transit centers, indicators were not provided.

### EDUCATION:

- Increase in the overall camp school age (3 - 18 years) going population from 131,590 to 136,991 has seen a decrease in overall GER from 51% to 50%.
- Pre - primary education saw an increase in GER by 3 %, from 36% to 39%. This is attributed to community mobilization in two camps, Tierkidi and Punyido 2 that saw more children enroll in the reporting period.
- The Primary school age population has increase by 4,000. This brings down the GER of this age group from 65% to 62%.
- More classroom have bee constructed bringing down the number of students per class in primary school to 119 from previous 173.

### HEALTH:

**Mortality:** Crude and Under 5 mortality rates have been within the SPHERE standards for several months. Good case management by partners for diseases such as severe malaria, dehydration secondary to diarrhoea and complications of severe malnutrition contributed to reduction in mortality. Strengthened surveillance and other disease prevention efforts have contributed to early case detection and treatment.

#### **Morbidity indicators**

**Diarrhea:** The incidence of diarrheal diseases have increased in the refugee camps. The inter-ethnic conflict in Gambella region have affected the provision of water and may have contributed to increased diarrheal diseases during the reporting period .

**Malaria:** Incidence rates have slightly decreased in all refugee locations and this may be due to seasonal change in the area. The distribution of mosquito bed nets in all refugee locations took place since the month of June. Indoor residual chemical spraying was conducted in Kule, Tierkidi and Pugnido and the combination of these strategies also continue to contribute to reduction of risk of malaria infection.

#### **Vaccination:**

The coverage is between 95% and 100% at the entry points of Pagak and Akobo for selective and non-selective vaccination. The routine immunization coverage is lower in the camps because most children had been vaccinated at the entry points and thus not reflected in the camp data. Community awareness on Expanded Programme on Immunization (EPI) also contributed to low routine EPI coverage.
