Update on the Dengue situation in the Western Pacific Region

Northern Hemisphere

China
As of 30 April 2016, there were 121 cases of dengue reported in China in 2016. This number is higher than the number of cases reported in same period of the previous four years (2012-2015) (Figure 1).

Malaysia (No updates)
For the week from 17 April to 23 April in 2016, the number of dengue cases was 1,607, a decrease from 1,854 cases reported in the previous week. The number of cases was higher than that reported during the same period in 2015. Within the same period there were two dengue-related deaths reported, bringing the total number of deaths for 2016 to 94, compared to a total of 120 deaths during the same reporting period in 2015 (Figure 2).

Viet Nam (No updates)

As of 29 February 2016, there were 16,967 cases of dengue including 7 deaths reported in 39 of 63 provinces in Viet Nam. The cumulative number of cases reported in 2016 is higher than that reported during the same period in 2015 and higher than the median for the same reporting period between 2010 and 2014 (Figure 7). The number of cases reported in February 2016 was 30% lower than that reported in January 2016 whilst the number of deaths increased by 5 (13,086 cases and 2 deaths).

Southern Hemisphere

Australia

As of 31 May 2016, there were 1044 laboratory-confirmed dengue cases in Australia. The number of cases reported in May is lower than other months in 2016 but is generally in line within the seasonal trend (2011-2015) (Figure 8).
