<tbody>
<tr>
<td><strong>Dengue</strong>: 105 cases of Dengue are reported this week. The majority of the cases are from Rupandehi (24 cases), Lalitpur (8 cases), and Morang (7 cases).</td>
</tr>
<tr>
<td><strong>Malaria</strong>: Four Malaria cases are reported this week and one each from Sindhuli, Rolpa, Pyuthan and Palpa.</td>
</tr>
<tr>
<td><strong>Kala-azar</strong>: Two cases of Kala-azar reported this week. One each cases from Pyuthan and Dailekh.</td>
</tr>
<tr>
<td><strong>Scrub typhus</strong>: 35 cases of Scrub typhus are reported this week. The majority of the cases are from Kailali (9 cases), and Rupandehi (5 cases).</td>
</tr>
<tr>
<td><strong>SARI</strong>: 266 cases of SARI are reported this week. The majority of these cases are from Morang (35 cases), Kailali (24 cases), and Palpa (17 cases).</td>
</tr>
</tbody>
</table>

The EWARS was established in 1997 to strengthen the flow of information on vector-borne and other outbreak prone infectious diseases from the district to Epidemiology and Disease Control Division (EDCD) and Vector-Borne Disease Research and Training Center (VBDRTC), Hetauda. Rapid Response Teams (RRTs) can be mobilized at short notice to facilitate prompt outbreak response at Central, Regional and District level. RRTs can also support local level health institutions for investigation and outbreak control activities.

This information system is hospital-based. So far, the EWARS mainly focuses on the weekly reporting of number of cases and deaths (including "zero" reports) of six priority diseases/syndromes—Malaria, Kala-azar, Dengue, Acute Gastroenteritis (AGE), Cholera and Severe Acute Respiratory Infection (SARI), and other epidemic potential diseases/syndromes (like enteric fever). It equally focuses on immediate reporting (to be reported within 24 hours of diagnosis) of one confirmed case of Cholera, Kala-azar severe and complicated Malaria and one suspect/clinical case of Dengue as well as 5 or more cases of AGE and SARI from the same geographical locality in one-week period.
1.1 Acute Gastro-Enteritis (AGE) and Cholera

103 cases of AGE are reported in the 48th epidemiological week this year. The majority of these cases are from Kathmandu (8 cases), Humla (8 cases), and Morang (7 cases). 192 cases of AGE were reported this week in 2018.

Cholera: One case of Cholera has been reported so far this year by Teku hospital, Kathmandu and the case was from Tahachal, Kathmandu.

1.2 Severe Acute Respiratory Infection (SARI)

266 cases of SARI are reported in the 48th epidemiological week this year. The majority of cases are from Morang (35 cases), Kailali (24 cases), and Palpa (17 cases). 177 cases of SARI were reported this week in 2018.
1.3 Malaria
Four Malaria cases are reported this week and one each from Sindhuli, Rolpa, Pyuthan and Palpa. Three cases of Malaria were reported this week in 2018.

1.4 Dengue
Dengue: 105 cases of Dengue are reported this week. The majority of the cases are from Rupandehi (24 cases), Lalitpur (8 cases), and Morang (7 cases). 19 cases of Dengue were reported this week in 2018.

1.5 Kala-azar
Two cases of Kala-azar reported this week. One each cases from Pyuthan and Dailekh. Three case of Kala-azar were reported this week in 2018.

Other diseases
Scrub typhus
35 cases of Scrub typhus are reported this week. The majority of the cases are from Kailali (9 cases), and Rupandehi (5 cases). 7 cases of Scrub typhus were reported this week in 2018.

Acknowledgement: The Epidemiology and Disease Control Division highly acknowledges the contribution from all the medical recorders, EWARS focal persons, rapid response team members and technical support from WHO for preparation of this bulletin.

Note: This bulletin is also available at EDCD’s website www.edcd.gov.np.

Thank you.
