1. Current information on cholera from January to July 2013

- **Cumulative cholera cases**: 32,290 (Jan. - 28 July 2013)
- **Number of deaths**: 285 (Jan. - 28 July 2013)

2. General information on cholera in Haiti (Oct. 2010 - 28 July 2013)

- **Cumulative cholera cases**: 668,270 (Oct. 10 - 28 July 13)
- **Number of deaths**: 8,197 (Oct. 10 - 28 July 13)

3. Current priority areas (Jan.-July 2013)

Based on number of cholera cases in department:
- High
- Medium
- Low

4. Overview of the Cholera situation from 2010 to July 2013

In epidemiology, the case fatality rate is the ratio of deaths to the number of cases. It allows to know the level of care in a specific area.

**Cumulative cholera cases**: 8,197 (Oct. 10 - 28 July 13)

**Fatality**: 1.2% (Jan. - 28 July 2013)

**New cholera cases (per month)**:
- 28 Jan.
- 17,061
- 9,261
- 5,136

**Fatality rates (per month)**:
- Jan. - Feb.: 1.2%
- Mar.: 0.9%
- Apr.: 1.2%
- May: 0.72%

**Reported cases: Weeks 26 to 29 (July 2013)**
- New cholera cases: 11,220
- Fatality rates: 1.2%

**Current priority areas (Jan.-July 2013)**

Based on number of cholera cases in department:
- High
- Medium
- Low

**Update date**: 01 August 2013

**2. Plan for the elimination of Cholera in HAITI (Contingency plan, 2 year plan and 10 year plan)** (m = million $ US)

- 2.2 billion USD to eliminate cholera in Haiti
- Health: 269 m of requirement
- WASH: 1.9 billion of requirement

2 year operational plan:

- 448 million USD to reduce incidence of cholera
  - Health: 125 m of requirement
  - WASH: 323 m of requirement

6 month emergency plan:

- 28 million USD to prevent and response of cholera
  - Health: 13 m of requirement
  - WASH: 15 m of requirement

10 year plan:

- The Government of Haiti launched on 27 February the 10 year cholera elimination plan.
- The plan aims to tackle the conditions that make the transmission of cholera in Haiti possible by improving access to water, sanitation, hygiene and health care facilities for 80-90% of the Haitian population.

The 2 year operational plan is the first phase of implementation of the cholera elimination plan and prioritizes key short-term objectives related to mitigation efforts to contain the disease.

This plan aims to reduce the incidence of cholera from 3 to 0.5 per cent and to achieve 80 per cent coverage of treated water in cholera affected areas.

A contingency/emergency plan has also been developed as part of preparations for the 2013 hurricane season which generally entails a surge in cases of cholera.

The contingency plan aims to contain the spread of cholera and reduce morbidity and mortality rates through a rapid detection and response to cases notified.
