This map illustrates satellite-based area of refugee camp and semi-automated tent detections in Merkez district, Hatay province, Turkey. A reduction in tent count of 400 tents has been detected within the Apaydin Camp where the number of tents was reduced. This change can be due to a new organization of camps or the fluctuation in the movements of the Syrian population in the Turkish camps.

This is a preliminary analysis & has not yet been validated in the field. Please send ground feedback to UNITAR / UNOSAT.
