Background and Methodology

Since August 2017, an estimated 728,306 Rohingya refugees have arrived in Bangladesh’s Cox’s Bazar district from Myanmar, bringing the total number of refugees residing in Cox’s Bazar, to approximately 906,527. The rapid and massive increase of the refugee population, concentrated in the south of the district in Ukhia and Teknaf, has reportedly had a substantial impact on Bangladeshi host communities’ food security, economic vulnerability, market access, labour opportunities and environment.

Based on an identified data gap regarding the needs of the host community population after August 2017, a multi-sector needs assessment (MSNA) was conducted under the coordination of ISCG and facilitated by REACH, in partnership with NPM-ACAPS Analysis Hub, and Translators Without Borders in consultation with Union Nirbahi Officers (UNO). The MSNA targeted the Bangladeshi host community population living in 11 unions across two Upazilas: Ukhia (5 unions) and Teknaf (6 unions). This series of factsheets (14 in total) presents the findings at the Union level (11), the Upazila level (2), and the overall level (1). This factsheet presents the findings for Sabrang union. A household survey was conducted using a stratified random sample to produce results for Sabrang where 263 households, that comprised of 1,520 individuals, were surveyed. The results are generalisable to 95% confidence level and 6% margin of error for Sabrang. Data for this assessment was collected between 11 November - 6 December 2018. The assessment aimed for a 50/50 balance between male and female respondents.

11. Three most common education barriers are shown, and respondents could select more than one option. Sample size aged 5-11 boys (n=126) and girls (n=130) and aged 12-17 boys (n=99) and girls (n=120)

12. Respondents could select more than one option. The option of food was not included in the types of aid. Sample size for household with children aged 5-11 (n=41) and children aged 12-17 (n=50)

13. In Bangladesh, housing is classified into four categories according to structure type and the materials used:
   1) Jhuprie (temporary): are shacks made from branches, bags, tarpaulin, jute, etc.
   2) Kutcha (temporary): made of mud, bamboo, wood and corrugated iron sheets (CIS) as roofs.
   3) Semi-pucca (semi-permanent): where walls are made partially of bricks, floors are made from cement, and roofs from corrugated iron sheets.
   4) Pucca (permanent): with walls of bricks and roofs of concrete.

14. Three most common primary fuels for cooking are shown.

15. This question was only asked to the 82% of respondents who reported their households were connected to the grid.

16. Five most common items are shown, and respondents could select up to three options.
22% of households reported having a solar light

Security of tenure
% of households reporting ownership of their plot of land and/or house
Yes, I own the land 88%
No, I do not own the land 6%

17. This question was asked to households that reported not owning land.
18. This question was asked only to the 100% respondents who reported improved sources of water as their primary water source.
19. Three most common problems of collecting water are shown, and respondents could select more than one option.
20. Three most common water treatment methods are shown, and respondents could select more than one option.
Multi-Sector Needs Assessment - Host Community
Sabrang Union, Teknaf Upazila, Cox’s Bazar, Bangladesh

Sanitation
% of households by reported usual defecation location

- Household Latrine: 92%
- Communal Latrine: 7%
- Open defecation: 1%

21% of households reported facing problems accessing latrines

% of households reporting problems accessing latrines, by problem:
1. Latrine is not safe: 9%
2. Latrine is not clean: 8%
3. Latrine smells bad: 7%

Environmental sanitation
% of households reporting visible presence of solid waste, stagnant water or human faeces within 30 metres of their shelter during the 30 days prior to data collection:

- Trash/ solid waste: 42%
- Stagnant water: 33%
- Human faeces: 29%

Hygiene
52% respondents were able to name at least 3 of the 5 critical times for handwashing

% of households where respondent named different handwashing times:
- After defecation: 93%
- Before eating: 92%
- Before cooking: 47%
- After cleaning a child’s bottom: 14%
- Before feeding children: 14%

26% of households reported women facing problems with accessing menstrual hygiene materials

% of households reporting problems accessing menstrual hygiene material, by problem:
- Too expensive: 16%
- Other needs are prioritized: 15%
- Not enough available in market: 5%
- Preferred type not available: 5%

Food Security and Livelihood
% of households reporting primary food source

- Market: 92%
- Own production: 4%
- Other: 4%

% of households falling into different food consumption groups based on household Food Consumption Score:

- Acceptable: 71%
- Borderline: 23%
- Poor: 6%

Footnotes:
21. Three most common problems accessing latrine are shown, and respondents could select more than one option.
22. Respondents were asked about solid waste, stagnant water and human faeces in three separate questions.
23. Respondents could select more than one option.
24. Questions on menstrual hygiene management were only asked to female respondents, by female enumerators.
25. The frequency weighted diet diversity score or “Food Consumption Score” is a score calculated using the frequency of consumption of 9 different food groups consumed by a household/individual during the 7 days before data collection. Based on the score they receive, households are categorised into food consumption groups indicating different levels of dietary diversity. Bangladesh-specific thresholds were used to make these calculations. See link: https://www.wfp.org/content/coping-strategies-index-field-methods-manual-2nd-edition
Average household Coping Strategy Index (CSI) was 8 (out of a possible 56)\(^{26}\)

% of household reporting use of different consumption based coping strategy\(^{27}\):
- Rely on less preferred and less expensive food: 76%
- Borrow food, or rely on help from a friend or relative: 38%
- Limit portion size at meal times: 33%
- Reduce number of meals eaten in a day: 25%
- Restrict consumption by adults in order for small children to eat: 17%

% of households reporting the three main sources of income sustaining their household in the 30 days prior to data collection\(^{28}\):
- Small business: 32%
- Skilled wage labour: 26%
- Fishing: 25%
- Remittances from abroad: 18%
- Agricultural/fishing casual labour: 16%

% of households reporting changes in their economic status in the 12 months prior to data collection:
- Significantly improved: 5%
- Somewhat improved: 24%
- Not changed: 34%
- Somewhat deteriorated: 32%
- Significantly deteriorated: 5%

% of households reporting changes in cost of living in the 12 months prior to data collection:
- Significantly increased: 31%
- Somewhat increased: 48%
- Not changed: 16%
- Somewhat decreased: 5%
- Significantly decreased: 0%

% of households where women of reproductive age were reported to have awareness of different sources of support for infant and young child feeding\(^{29}\):
- Doctors: 73%
- Older relatives: 15%
- Midwife/nurse: 7%

32% of females aged 20-25 years were reported to have married before age 18\(^{30}\)

% of households reporting the presence of community based protection mechanisms\(^{31}\):
- None: 50%
- Natural disaster response: 21%
- Safety/Security: 21%

87% of households reported feeling secure in their current location.

Perceived attitudes and experiences regarding Rohingya refugees:
% of households reporting different levels of interaction with Rohingya refugees:
- Never: 67%
- Everyday: 6%
- Once a week: 13%
- Once a month: 14%

26. This assessment used the "reduced" CSI (rCSI), which measures coping behaviours in the 7 days prior to the data collection in response to inadequate food or insufficient money to buy food.
27. Respondents where asked on each coping strategy and how many day in the past 7 days did they use this strategy.
28. Five most common main sources of income are shown, and respondents could select up to three options.
29. This question was asked to female respondents, by female enumerators. Respondents could select more than one option. The results are generalisable to 95% confidence level and 10% margin of error.
30. This question was only asked for women/men between the age of 20-25, who reported to be married. Sample size male (n=26) and female (n=83).
31. Three most common responses are shown, and respondents could select more than one option. Question was framed as follows: "Are you aware of any groups or committees of community members in your location that are working on any of the following issues?"
