

## Distribution Coverage by State

### Overview

- UNHCR manages the NFI Common Pipeline which is a source of reliable, predictable ES/NFIs to sector partners to ensure coverage of life-saving emergency shelter needs of newly displaced conflict and disaster-affected populations who have lost their household belongings due to events in their areas of origin or in areas of displacement in a more effective and efficient way.
- Maximizing economies of scale, the Pipeline promotes supply chain efficiencies by reducing costs, avoiding duplication of efforts, standardizing items distributed, and thus promoting effectiveness.
- The provision of these items has an important impact on the health and dignity of the beneficiaries by protecting them from the elements, thus mitigating health risks and providing physical protection (sun, rain and privacy), as well as safety.
- UNHCR is responsible for procuring, warehousing and transporting stocks to partners at the location of distribution in Darfur and other areas. Partners are responsible for submission of Assessment Reports, Distribution Reports and Post-Distribution Monitoring Reports.

**Items distributed**

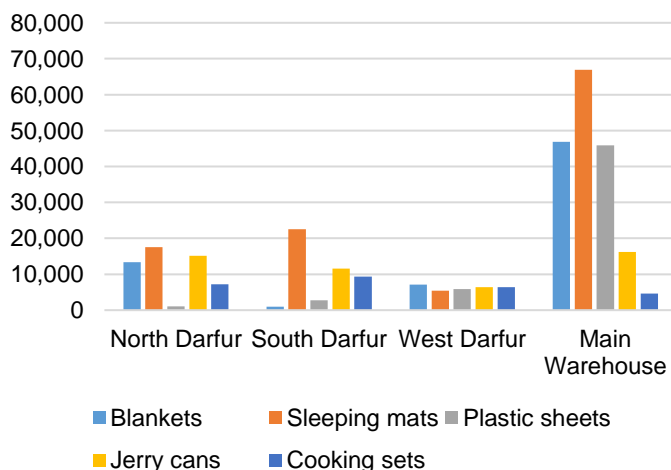

### Partners

The NFI common pipeline provided ES/NFIs for more than 7,000 IDP families in Darfur and Blue Nile state – in addition to 4,894 refugees in Kario camp, East Darfur – through:

- |                    |       |
