

## Epidemiological Week 10 (Week ending 11<sup>th</sup> March, 2018)

Highlights	Cumulative figures as of week 10
<ul style="list-style-type: none"> <li>Total of 171 Health Facilities across Somalia have submitted weekly report of communicable diseases in the electronic early warning disease surveillance system in week 10, 2018.</li> <li>Total number of consultations decreased from 51,174 in week 9 to 44,693 in week 10.</li> <li>Total Alerts 3,183 were received out of which 142 were confirmed as true alerts.</li> <li>The highest number of diseases in week 10 were: other acute diarrhoeas (1,875 cases), influenza like illness (1,455 cases) followed by severe acute respiratory illness (1,029 cases).</li> <li>A total of 163 new cases of AWD 1 death were reported in week 10 compared to 174 AWD cases no deaths in week 9.</li> <li>A cumulative total of 1,477<sup>1</sup> cases including 9 deaths have been reported since December 2017.</li> <li>The new AWD/cholera cases reported in Beletweyne started in December 2017. All the new outbreaks in Banadir, Kismayo and Jowhar started in 2018</li> <li>The number of measles cases decreased from 447 in week 9 to 252 cases reported in week 10.</li> </ul>	<ul style="list-style-type: none"> <li>591,996 cumulative consultations to date</li> <li>1,477 cumulative cases of AWD and 9 deaths since December 2017.</li> <li>3,807 cumulative cases of suspected measles cases since the beginning of 2018.</li> <li>Of the 3,807 measles cases, 2,381 (63%) are under 5 years while 1,426 (37%) are above 5 years.</li> <li>Total Alerts 3,183 of which 142 were true</li> <li>Completeness of reporting 65% (171 health facilities)</li> </ul>

Table 1. Summary of Alerts for epidemic prone diseases

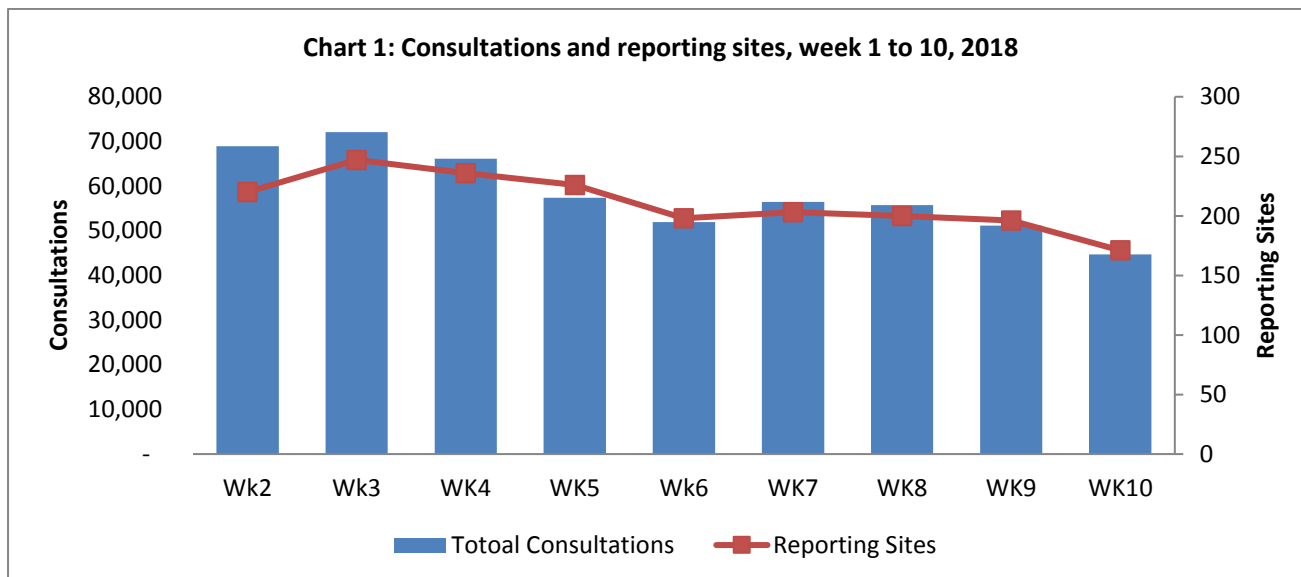

Disease	Wk8 2018	Wk9 2018	Wk10 2018	Cumulative cases (Wk 1 – 10, 2018)
Total consultations	55775	51,174	44693	591,996
Other Acute Diarrheas	2068	2061	1875	21948
Influenza Like Illness	1787	1697	1455	20,011
Severe Acute Respiratory Illness	1112	1038	1029	9,365
Suspected Measles	586	447	252	3807
Confirmed Malaria	142	108	139	2362
Acute Watery Diarrhoea	62	74	36	709
Bloody Diarrhea	38	56	33	454
Whooping Cough	104	23	26	442
Acute Jaundice	5	2	7	43
Suspected Meningitis	3	3	1	24
Diphtheria	6	1	0	23
Neonatal Tetanus	0	0	0	17
Acute Flaccid Paralysis	0	0	0	1
Viral Hemorrhagic Fever	0	0	0	2

<sup>1</sup> The Cases of AWD/Cholera in the eWARN system are collected from sentinel sites. while the cases of AWD/cholera in Sitrep are collected from temporary CTC sites which doesn't include the Sentinel sites

## Total number of Consultations and number of reporting sites

### Completeness of Reporting

Out of **265** Health Facilities expected to submit weekly report of communicable diseases in the electronic early warning disease surveillance system across Somalia, **171** reported data in week 10. Thus, the completeness of reporting is about **65%**. A total of **44,693** consultations were recorded in **week 10, 2018**. (See Table1)

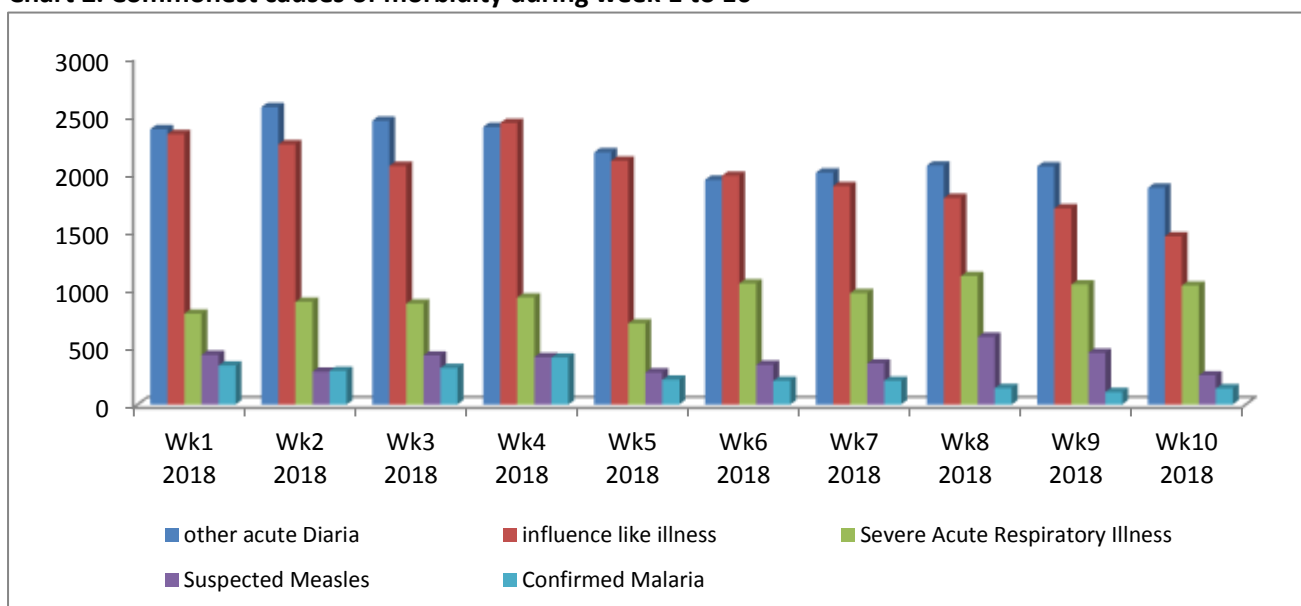

## Proportionate morbidity

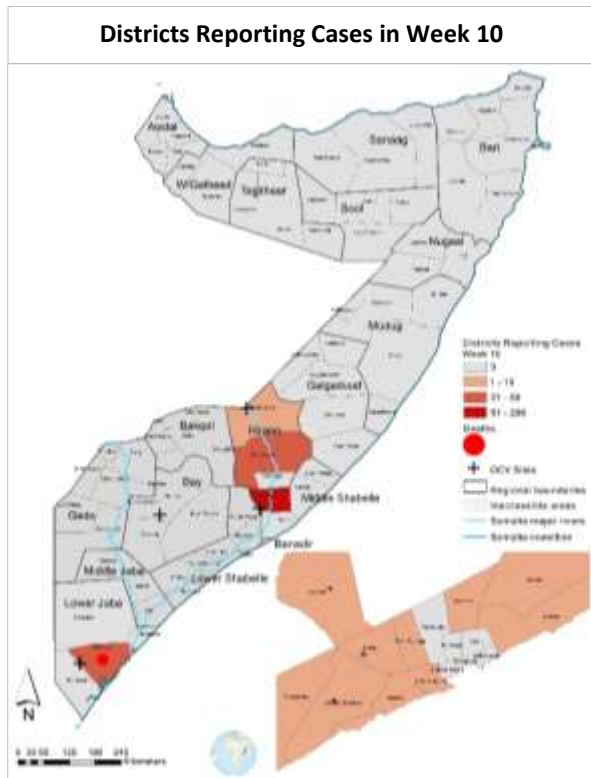

Other acute diarrhoeas, influenza like illness Severe Acute respiratory illness, suspected measles and Malaria are the commonest causes of morbidity across Somalia in 2018.

In week 10, the highest number of diseases: other acute diarrhoeas (**1,875 cases**), influenza like illness (**1,455 cases**) followed by severe acute respiratory illness (**1,029 cases**)

**Chart 2. Commonest causes of morbidity during week 1 to 10**

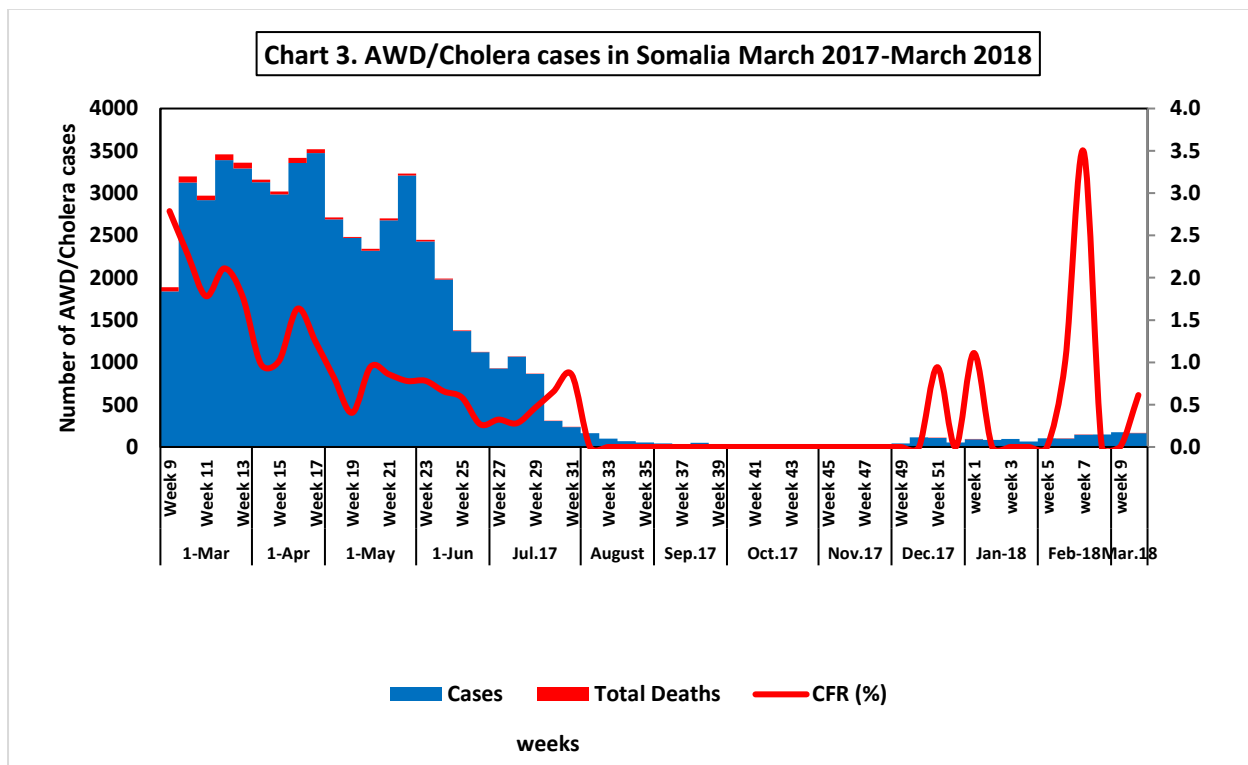

## Situation update of AWD/Cholera

Over the past 14 Weeks, there has been an increase in the number of AWD/Cholera cases reported in four regions (Banadir, Lower jubba Middle Shabelle and Hiiran. In week 10, active transmission of AWD/cholera was reported in Beletweyne district of Hiraan region, Jowhar district Middle Shabelle and Lower Jubba district Kismayo as well as in 10 districts of Banadir region. In Hiraan, Kismayo and Jowhar affected communities are reportedly using contaminated water from open water sources. The AWD outbreak that was reported in Beletweyne in December 2017 is responsible for the spread to other regions that are all located at the banks of river shabelle. The Oral Cholera Vaccination that was implemented in 11 high risk districts of the central region has greatly contributed to the reduction in the number of new

AWD/cholera cases according to last year.

	Week 9	Week 10	Cumulative as of Epi- Week 49, 2017, Wk 10.
Region	(26 <sup>th</sup> Feb to 4 <sup>th</sup> Mar 2018)	(5 <sup>th</sup> -11 <sup>th</sup> Mar 2018)	2018

<b>Total</b>	174	0	0	163	1	0.6	1,477	9	0.6

*The AWD/Deaths reported in this table have not been confirmed by stool analysis.*

#### **Cholera Situation in Hiraan, Lower Jubba, Middle Shabelle and Banadir.**

- The current AWD/Cholera event started in Beletweyne districts in December 2017 and continued in 2018. There has been an increase in the number of new AWD/Cholera cases in Beletweyne over the past weeks from 10 to 24 cases. 90% of all the affected cases in Beletweyne are children below 5 years. Only 4% of the AWD/Cholera cases reported in Hiraan received OCV vaccination during the campaign that was conducted in XaawoTaako and Koshin in March 2017
- The AWD/Cholera outbreak in Banadir region started in week 1 of 2018 following reports of similar outbreak in Hiraan. Banadir regions is one of the regions with the highest concentration of IDPs where access to safe water and sanitation facilities are limited. Of the 15 districts that make up Banadir region, 10 have so far reported cases and these are managed in Banadir CTC located in the capital Mogadishu. There has been a reduction in the number of AWD/Cholera cases from 48 to 28 cases in the past 2 weeks.
- Lower Jubba is one of the cholera hotspots in Somalia located at the border with Kenya in the South. The current AWD/Cholera outbreak in Kismayo district started in week 5 of 2018 in the IDP communities of Farjano where access to safe water and sanitation is also limited. The district is characterised by returnees from Kenya as well as those displaced by war in Middle Jubba. Even when OCV was implemented in Kismayo in March 2017, the reported cases of OCV did not receive OCV. This may be attributed to these being new cases who were absent during the time of the vaccination. Over the past week, the number of AWD/Cholera cases increased from 33 to 35 including 1 death that occurred in Farjano CTC
- Middle shabelle region is one of the cholera hot spots for the past decade with limited access to safe water and sanitation. The new AWD/Cholera outbreak in Middle Shabelle started in week 7 of 2018 and the most affected villages of Hantiwadag, Kumis, Bulo Sheik and Horseed. of the 276 cases so far reported, 50% are children below 5 years.

### Response activities implemented during the week

#### Coordination and Leadership.

- Coordination meetings were held in different states with the health and WASH cluster partners to develop risk specific interventions for most affected villages with cholera
- Weekly reports were developed at state level and disseminated to all partners to inform public health actions

#### Case management and Oral Cholera Vaccination

- The cholera treatment facilities Middle Shabelle in Banadir, Kismayo and Beletweyne have been opened to manage AWD/Cholera cases reported from affected districts
- Following the completion of the first round of Oral cholera Vaccination campaign in Afmadow and Hudur, the second round of OCV in same areas has been postponed to end of March after completion of measles campaign

#### Surveillance and Laboratory Investigations

- A total of 4 regional Rapid Response Teams in affected regions have been deployed to verify and investigate AWD/Cholera rumors in all the affected regions/districts
- AWD/Cholera alerts are being received from different regions using the newly activated EWARN system.
- Of the 10 stool samples collected from Bulo-barde, Hiran region, 6 were positive for Vibrio Cholera while all the 10 stool samples collected from Herale in Galgadud region were negative for Vibrio Cholera.
- Routine data collection using standard line lists for AWD/Cholera was conducted to identify the most vulnerable populations and drivers of the epidemic in different areas

## Water Sanitation and Hygiene

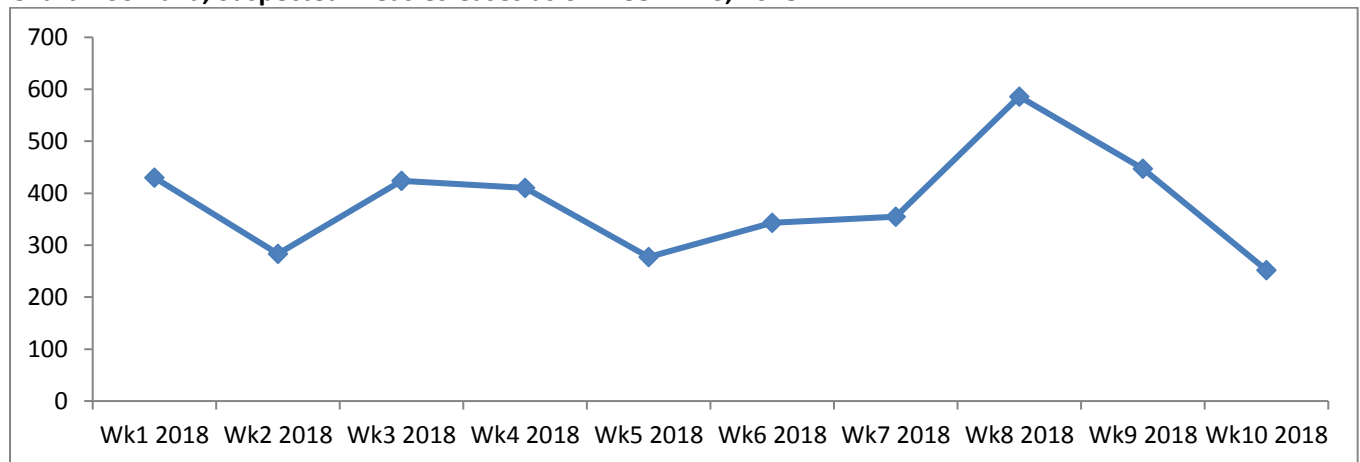

- Hygienic promotion using radio messages is being implemented by WASH cluster partners in Jowhar
- Distribution of hygienic kits is implemented by WASH cluster partners in the 6 villages of Jowhar that are affected by cholera.
- Chlorination of water sources was conducted by the health cluster in Jowhar
- Water tracking has been conducted in 6 villages of Jowhar district by PAHO.

## Measles Situations

The number of suspected measles cases decreased from **447** cases in week9 to **252** cases in week 10.

Cumulatively, **3,807** cases of suspected measles have been reported across Somalia since the beginning of the year, 2018. Of the **3,807** measles cases, **2,381 (63%)** are under 5 years while **1,426(37%)** are above 5 years. The most affected regions include Galgaduud (**830cases**), Bay (**539 Cases**) Banadir (**550 cases**), Mudug (**346 Cases**), and Sool(**321 cases**) (See Table 4).

### Measles Outbreak response

The Federal Ministry of Health of Somalia in collaboration with WHO, UNICEF and other partners has launched the measles vaccination campaign in Mogadishu and Somaliland respectively on 11<sup>th</sup> March 2018 to vaccinate a target about 3.7million children 6 months – 10 years in South Central and Somaliland.

The measles vaccination campaign was conducted in Puntland in January 2018 in which a 933,690 children aged 6 months to 10 years.
